REPORT

TO

HIS EXCELLENCY IVOR CHURCHILL, BARON WIMBORNE,

&c., &c., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

I have the honour to submit to your Excellency my Fifty-third Annual Report, containing the details of Marriages, Births and Deaths in Ireland, registered during the year 1916.

GENERAL SUMMARY.

The marriage rate (5·13 marriages per 1,000 of the population) for the year 1916 is low, being 0·44 per 1,000 under that for 1915 and 0·11 under the average for the ten years, 1906–15.

The birth rate for 1916 (21·1 per 1,000 of the population) is 0·9 per 1,000 under the rate for 1915, and 1·9 under the average for the ten years, 1906–15. It is the lowest annual rate recorded for Ireland.

The rate represented by the deaths registered during the year 1916 is 16·46 per 1,000, being 1·10 under the rate for 1915 and 0·55 under the average for the ten years, 1906–15. With the exception of the rate for 1912, which was also 16·46 per 1,000, and that for 1914 (16·28 per 1,000), the death rate from all causes for 1916 is the lowest since 1871.

The death rate from tuberculous disease (2·15 per 1,000) is, with the exception of the rates for 1912, 1913, and 1914, viz., 2·15, 2·14, and 2·07, the lowest yet recorded for Ireland, being 0·05 per 1,000 under the rate for 1915, and 0·19 per 1,000 under the average for the ten years 1906–15.

The infant mortality rate (deaths of infants under one year old per 1,000 births registered) in 1916 was 83 per 1,000, being 9 per 1,000 under the rate for 1915, and also 9 under the average for the decennial period, 1906–15. The rate for 1916 is the lowest on record.

TABLE I.—Showing for each of the years 1906–1916 the estimated **Population***; the number of **Marriages, Births** and **Deaths** registered, and the number of **Emigrants** (Natives of Ireland) enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years, 1906–1915.

Offences coming within the scope of the Acts administered by this Department reported during the financial year ended 31st March last, numbered 765. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 29 cases.

In 25 of these the parties were convicted and punished; two cases were dismissed; and in the remaining two the proceedings were abandoned, the parties complying with the law.

Amongst the offences dealt with the following are included:—Neglect to register births; neglect to register deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths.

A sum of £90 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £58 15*s.* 6*d.*, of which sum £26 6*s.* 2*d.* was paid for local professional assistance, and £27 5*s.* 0*d.* for mileage and allowances to the Registrars, the balance of the expenditure being mainly in respect of Court costs.

MARRIAGES.

The number of marriages registered during the year was 22,245, being equivalent to a rate of 5·13 per 1,000 of the estimated population *; this rate is 0·44 below that for the previous year, and 0·11 below the average for the ten years, 1906–1915.

Of the 22,245 marriages registered during last year, 16,393 were of Roman Catholics, showing a decrease of 941 as compared with the number recorded in 1915, 3,011 were celebrated according to the rites and ceremonies of the Church of Ireland—a decrease of 510 as compared with the previous year; 2,049 as compared with 2,412 in 1915, were in Presbyterian Meeting-houses; 441, as against 479 in 1915, in "Registered Buildings" belonging to various religious denominations; 338 by civil contract in the Registrars' offices, as against 392 in 1915; 3 were according to the usages of the Society of Friends, as against 7 in 1914; and 10, as compared with 9 in 1915, were according to the Jewish rites.

The marriages of Roman Catholics are equivalent to a rate of 5·12 per 1,000 of the Roman Catholic population estimated to the middle of 1916, or 0·10 above the corresponding average rate for the preceding ten years, and the other marriages are equivalent to a rate of 5·16 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·71 under the corresponding average rate for the ten years, 1906-1915.

Of the 3,011 marriages celebrated according to the rites of the Church of Ireland, there were 80 by special licence, 2,553 by licence, and 370 after the publication of banns; in 8 instances no information was afforded as to which of these methods was adopted.

* The rates for the total of Ireland, the county boroughs of Dublin and Belfast and Londonderry county and county borough, are based on the estimated population in the middle of the respective years, those for the provinces and remaining counties on the population according to the Census of 1911. (See page 58).

5. Presbytery of Ireland (United Free Church of Scotland)	5	8	19
Total	180	630	1,960

In Ireland, there being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics, a registration of the churches and chapels of the Roman Catholic Church is not necessary. With reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized otherwise than by special licence. On the 31st December, 1916, there were 1,485 churches and chapels of the Church of Ireland, 630 registered Presbyterian Meeting-houses, and 433 " Registered Buildings " belonging to various religious denominations.

The number of " Registered Buildings " belonging to the several religious bodies, as revised for the year 1916, is shown in the following list :—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists	266	Salvation Army	9	" Undenominational " ...	2
Reformed Presbyterians ...	39	Seceders	8	Jews	1
Baptists	33	" The Catholic Apostolic Church "	2	" Holiness Movement " Church	1
Independents, or Congregationalists	30	Non-Subscribing Unitarians	1		
Christian Brethren ...	31	Non-Subscribing Christians	1	Total	433
Moravians, or United Brethren	8	Welsh Presbyterians ...	1		

During the year 1916, of the 22,245 marriages registered, 7,363 were recorded in the first quarter, 4,713 in the second, 5,223 in the third, and 4,946 in the fourth quarter.

Printed image digitised by the University of Southampton Library Digitisation Unit

It will be ascertained from the figures given in the Abstract of Marriages, pages 12–13, that the marriages of bachelors with spinsters constituted 89·5 per cent. of the total; that those of widowers and spinsters were 6·2 per cent.; that the marriages of bachelors and widows were 2·7 per cent.: and that those of widowers and widows formed 1·6 per cent. of the total marriages. Thus, of the men married, 7·8 per cent. were widowers, and of the women 4·3 per cent. were widows, so that, in 11 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1906-1916, and the average number for the ten years, 1906-1915, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

The entry of "minor" or "full age," as the case may be, in the age column of Marriage Registers or Certificates, satisfies the requirements of the law in Ireland, so far as the ages of the contracting parties are concerned. This circumstance, which is taken advantage of in a great many instances, is to be regretted, as a complete record of the ages of the persons married would be valuable from many points of view. In the year 1865, out of 30,802 marriages registered in Ireland, the ages of both parties were given in 13,910 cases, being equal to 45·2 per cent. of the total marriages in that year. In 1916 the number of instances in which both parties furnished their ages was 4,868,* equivalent to a rate of 21·9 per cent. of the total marriages recorded. Of those married in 1916 in Ireland 23·6 per cent. of the husbands and 24·7 per cent. of the wives made definite statements of their age, the corresponding figures for England and Wales for 1914 being 99·4 and 99·3 respectively.

During the year, 406, or 1·83 per cent. of the men married were under age; and of the women married 1,464, or 6·58 per cent., were minors.

The proportion of husbands who married under age in 1916 was as follows for each province:—Leinster, 2·38 per cent. of marriages; Ulster, 1·97 per cent.; Munster, 1·48 per cent.; and Connaught, 0·63 per cent.

The corresponding proportions for females were—Ulster, 8·22 per cent.; Leinster, 6·83; Munster, 5·11; and Connaught, 3·32 per cent.

It may be stated that in Ireland the percentage of persons married who were under age is very far below the corresponding percentages in England and Scotland.

* In 1,004 instances the age at marriage was stated by only one of the contracting parties, viz., the cases of 377 men and 627 women married.

Printed image digitised by the University of Southampton Library Digitisation Unit

The signatures of the contracting parties in the marriage registers or certificates afford a rough test of the progress of elementary education in Ireland. In the year 1916 there were 21,183 or 95·2 per cent., of the husbands, and 21,610, or 97·1 per cent., of the wives, who wrote their names, and the remainder signed by "mark," as against 20,710, or 91·4 per cent., of the husbands, and 21,253, or 93·8 per cent., of the wives, in the year 1906.

During the year 1916, 96·7 per cent. of the men married in the province of Leinster wrote their names; 96·5 per cent. in Munster; 94·3 per cent. in Ulster, and 91·9 per cent. in Connaught; and, among women, the percentages were as follows:—Munster, 98·1; Leinster, 98·0; Ulster, 96·4; and Connaught, 95·5.

In 220 cases both of the persons married signed the register by "mark" and the register was thus signed by either the husband or the wife in 1,257 cases, so that in 1,477 cases, or 6·6 per cent. of the total number of marriages, one or both of the parties attested the signature by "mark"; and in 20,768 marriages, or 93·4 per cent., *both* parties wrote their names.

The following table gives for Ireland in each of the eleven years 1906-1916 the proportion of persons married who wrote their names in the registers or certificates; the proportion of minors married; of widowers; and of widows:—

TABLE VI.—Showing, as regards the **Marriages** in Ireland during the years 1906–1916, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-Marriages.**

Years.	Signed their Names in writing.		Persons not of Full Age.		Re-marriages.	
					Widowers.	Widows.
	Of 100 Men Married.	Of 100 Women Married.	Of 100 Men Married.	Of 100 Women Married.	Of 100 Men Married.	Of 100 Women Married.
1906 ...	91·4	93·8	1·37	4·84	8·42	4·07
1907 ...	92·0	94·0	1·44	5·22	8·37	3·97
1908 ...	92·0	94·5	1·66	6·38	8·58	4·03
1909 ...	93·5	95·0	1·67	6·84	8·07	3·89
1910 ...	93·5	95·3	1·51	6·28	7·92	3·93
1911 ...	93·9	96·0	1·23	5·31	8·06	3·32
1912 ...	94·3	96·2	1·75	6·38	8·23	4·07
1913 ...	94·2	96·5	1·89	6·91	7·90	4·13
1914 ...	94·6	96·4	1·63	6·24	7·95	4·01
1915 ...	95·3	96·6	1·95	6·81	7·37	3·82
1916 ...	95·2	97·1	1·83	6·58	7·78	4·34

In the province of Leinster, during the year 1916, as may be seen in Table III., the marriage rate was 5·3 per 1,000 of the population, according to the Census of 1911; the rate in Ulster was also 5·3 per 1,000; in Munster it was 5·1 per 1,000; and in Connaught 3·9 per 1,000.

BIRTHS.

The number of births registered during the year 1916 amounted to 91,437—47,161 boys and 44,276 girls—the ratio to the estimated population being 21·1 per 1,000, which is 1·9 below the average rate per 1,000 for the ten years, 1906-1915.

The proportion of male infants born alive in 1915 was 106·4 to every 100 females, and in 1916 it was 106·5. Thus for these two years the ratio was 106·5 males to 100 females, as compared with 105·1 males to every 100 females born alive during the five years 1910–14.

Of the 91,437 births registered in Ireland during the year, 88,719, or 97·0 per cent., were legitimate, and 2,718, or 3·0 per cent., were illegitimate, the latter being 0·1 below the percentage for the preceding year. As regards illegitimacy Ireland compares favourably with most other countries.

The male children born in wedlock numbered 45,751, and the female 42,968, or 106·5 of the former to every 100 of the latter; of the illegitimate children, 1,410 were males, and 1,308 females, being 107·8 boys to 100 girls.

Printed image digitised by the University of Southampton Library Digitisation Unit

Of the children born in Ulster, 3·9 per cent. were illegitimate; in Leinster, the percentage was 3·1; in Munster, 2·7; and in Connaught, 0·7; the corresponding percentages for the preceding year being:—for Ulster, 4·0; for Leinster, 3·4; for Munster, 2·6; and for Connaught, 0·8.

In the provinces the rates represented by the total births registered during the year 1916 were as follows:—Leinster, 21·1 per 1,000 of the population in 1911; Munster, 20·4; Ulster, 21·1; and Connaught, 20·3. [See Table III.].

Of the total births, 52·1 per cent. were registered in the first six months of the year (182 days), and 47·9 per cent. in the second six months of the year (184 days).

The total number of births registered in the first quarter of the year was 23,602; in the second, 24,055; in the third, 22,835; and in the fourth, 20,945.

Multiple Births.

During the year 1916 there were 1,235 twin births and 11 triplet births. The twin births were 1·35 per cent. of the total births, 1·39 per cent. of the single births, and 1·37 per cent. of the total mothers.

In the year 1915 there were 1,273 twin births and 14 triplet births, the twin births representing 1·33 per cent. of the total births, 1·37 per cent. of the single births, and 1·35 per cent. of the total mothers.

DEATHS.

There were 71,391 deaths registered in Ireland during the year 1916, equivalent to 16·5 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 35,975, and those of females to 35,416, the rate for males being 16·8 per 1,000, and for females 16·1 per 1,000.

The death-rate (16·5) is 1·1 below that for the year 1915, and 0·5 below the average rate for the ten years, 1906-1915.

For the provinces the recorded death-rates are as follows:—Connaught, 13·5; Munster, 15·4; Ulster, 16·6; and Leinster, 18·1 per 1,000 of the population, according to the Census of 1911. (See Table III.).

The deaths registered in the first half of the year, as observed in previous reports, generally outnumber those registered in the second half, the deaths registered in the six months of 1916, January to June inclusive, being equivalent to 56·1 per cent. of the total for the year, and those in the remaining six months to 43·9 per cent.

The annual rates represented by the deaths registered in each quarter are as follows:—19·0 per 1,000 of the population for the first quarter; 18·0 for the second; 13·5 for the third; and 15·4 for the fourth. The rate for the first quarter is 1·0 below, for the second 0·1 above, for the third 0·7 below, and for the fourth 0·6 below the average rate for the corresponding quarters in the ten years, 1906-1915.

As will be observed from the table on page 48, *of the* 71,391 *deaths registered during the year,* 4,008 *took place in Infirmaries and General and Special Hospitals;* 1,764 *in Public Lunatic Asylums;* 9,751 *in Workhouses and Workhouse Hospitals; and* 55,868 *were of persons who died "At their Own Homes, &c."*

Of the total deaths registered in Ireland, 5·6 per cent. occurred in "Infirmaries and General and Special Hospitals," the percentages for the four provinces varying from 0·7 in Connaught to 11·3 in Leinster. Deaths which took place in the Workhouses or Workhouse Hospitals constituted 13·7 per cent. of the total deaths, the respective percentages of these deaths for the provinces being—Leinster, 16·1; Munster, 18·9; Ulster, 9·8; and Connaught, 9·5.

CAUSES OF DEATH.

In the abstracts, commencing with page 36, will be found the number of deaths in Ireland registered during the year 1916, in provinces, counties, and superintendent registrars' districts (poor law unions). The mortality by causes, sexes, and ages is also given in these abstracts.

Table VIII., pages xiv.–xv., contains a summary of these deaths for each cause or group of causes, and also the corresponding number of deaths for each of the ten years preceding, with the average of these years.

The records for the year 1916 show a decrease of 4,760 in the number of deaths from all causes, as compared with 1915. The deaths from some of the principal causes in 1916 with the decreases in comparison with the preceding year are as follows :—Bronchitis, 5,873, decrease, 1,333 ; pneumonia, 3,701, decrease, 629 ; influenza, 1,014, decrease, 554 ; heart diseases, 8,082, decrease 329 ; tuberculous disease, 9,323, decrease, 202 ; measles, 452, decrease, 143 ; scarlet fever, 287, decrease, 139 ; cerebro-spinal fever, 63, decrease, 78 ; diarrhœa and enteritis (children under 2 years of age), 1,141, decrease, 58 ; meningitis and encephalitis, 622, decrease, 45 ; liver diseases, 491, decrease, 32 ; diphtheria, 291, decrease, 34 ; diseases of stomach, 1,093, decrease, 25 ; diseases and accidents of pregnancy and childbearing, 292, decrease, 20 ; diabetes, 387, decrease, 18 ; dysentery, 20, decrease, 3 ; and typhus, 33, decrease, one.

The deaths in 1916 from the following causes show increases, as compared with 1915 :—Violent deaths, 2,265 in 1916, increase, 310 ; cancer, 3,938, increase, 112 ; kidney diseases, 1752, increase, 90 ; whooping-cough, 887, increase, 64 ; enteric fever, 276, increase, 38 ; and puerperal septic diseases, 212, increase, 9.

Printed image digitised by the University of Southampton Library Digitisation Unit

ENTERIC FEVER.—Deaths from enteric fever, which fell from 289 in 1913 to 287 in 1914, and to 238 in 1915, numbered 276 in 1916, the latter being 32 under the average (308) for the ten years, 1906–15. Of the 276 deaths, 155 were those of males, and 121 of females.

In the following unions, 5 or more deaths were registered :—Dublin South (35), Dublin North (18), Lisburn (20—17 of these appertaining to Belfast county borough), Cork (12), Omagh (8), Sligo (8), Dundalk (6), Limerick (6), Athy (5), Belfast (5), and Loughrea (5).

TYPHUS.—The number of deaths from typhus, viz., 33, is the lowest annual number recorded for Ireland, and is 17 under the average (50) for the ten years, 1906–15.

Twenty of the 33 deaths were those of males, and 13 of females.

In Longford union 5 deaths from this disease were registered; in Galway, 4 deaths; in Lisburn, 4 deaths (3 belonging to Belfast county borough); in Cahersiveen, Carrickmacross, Dublin South, and Killadysert, 2 deaths each; and in the unions of Athy, Belfast, Cork, Dungarvan, Enniscorthy, Glenties, Kanturk, Lurgan, Monaghan, Thurles, Tuam, and Wexford, one death each.

SMALL-POX.—No death from this disease was reported.

MEASLES.—A comparatively low mortality from measles characterized the year 1916, the deaths registered numbering 452 (or 0·10 per 1,000 of the population), as compared with 920 in 1913, 1,003 in 1914, 595 in 1915, and an average of 689 for the ten years, 1906–1915.

Of the 452 deaths, 208, or 46 per cent, were registered in Belfast union; 65 in Dublin South; 35 in Dublin North; 21 in Carlow; 15 in Westport; 14 in Waterford; 13 in Newry; and 11 in Cork.

The deaths of males from measles numbered 222, and of females, 230.

SCARLET FEVER.—Although 36 above the average for the ten years, 1906–15, the deaths from scarlet fever (287) registered during the year 1916 are below the numbers recorded during the preceding four years, viz., 308, 358, 507, and 426 respectively.

The 287 deaths (comprising 146 deaths of males and 141 of females), are equivalent to a rate of 0·07 per 1,000 of the population.

In Lisburn union, 49 deaths were registered (43 appertaining to Belfast county borough), in Dublin, South, 25; in Dublin, North, 6; in Belfast, 13; in Birr, 11; and in Cootehill, 10.

Of the 287 deaths registered, 116, or about 40 per cent., were those of children under 5 years of age.

WHOOPING-COUGH.—Deaths from this disease which rose from 618 in 1913 to 751 in 1914 and to 823 in 1915, further rose to 887 in 1916, the latter number being, however, 34 below the average (921) for the preceding ten years. The rates per 1,000 of the population represented by the deaths in 1916, and the average for the ten years are 0·20 and 0·21, respectively.

The 887 deaths (396 of males, and 491 of females), included 843 deaths of children under 5 years of age.

In the union of Belfast 136 deaths occurred; in Dublin, North, 43; in Dublin, South, 32; in Limerick, 33; in Waterford, 27; in Omagh, 24; in Rathdown, 22; in Cork, Donegal, and Strabane unions, 21 deaths each; in Newry, 19; in Carrick-on-Suir and Lurgan, 17 deaths each; in Downpatrick, 16: and in each of the unions of Armagh and Ballymena, 15 deaths.

DIPHTHERIA.—With the exception of the year 1907, during which only 283 deaths from diphtheria were registered, the number of deaths for 1916, viz., 291, is lower than that for any year of the preceding decennial period, 1906-1915, the annual average for which is 343.

The 291 deaths from diphtheria in 1916 comprise 156 deaths of males and 135 of females. Included in the deaths of males are 90 of children under 5 years of age, or 58 per cent., and among the deaths of females, are 51 of children under 5 years of age, or 38 per cent. of the total deaths of females; the corresponding percentages as regards children dying from diphtheria in 1915 being 65 and 49 respectively.

The unions in which 5 or more deaths from diphtheria occurred were as follows :—Dublin, South (28), Dublin, North (10), Lisburn (28—21 of these appertaining to Belfast county borough), Cork (12), Belfast (9), Swineford (9), Waterford (8), Newtownards (7), Ballymena (5), Rathdrum (5), and Wexford (5).

The customary supplementary inquiries with reference to deaths registered as from membranous laryngitis, and croup, resulted in 60 deaths (30 of males and 30 of females), being finally assigned to the latter causes, these cases being stated to be either non-diphtheritic in character or further information was not forthcoming. The corresponding figures for 1915 were 78 deaths, 40 of males, and 38 of females.

* Per cent. of Total Deaths.

Printed image digitised by the University of Southampton Library Digitisation Unit

INFLUENZA.—During the year 1916 this disease accounted for 1,014 deaths (of males, 493, and of females, 521), 1,568 in 1915, 696 in 1914, 1,174 in 1913, and an average of 1,258 for the ten years 1906–1915. The 1,014 deaths are equivalent to a rate of 0·23 per 1,000 of the population, the average annual rate for the preceding decennial period being 0·29 per 1,000.

Of the deaths from influenza in 1916, those registered in the province of Munster afford a rate of 0·16 per 1,000 of the population, of the province according to the Census of 1911; in Leinster the rate was 0·20 per 1,000; in Connaught, 0·24 per 1,000; and in Ulster, the rate was 0·30 per 1,000.

The mortality from this disease for county and county borough areas is as follows, arranged in order from lowest to highest rate:—

Kerry, 0·07 per 1,000 of the population; Clare, 0·10; Tipperary, S.R., 0·10; Longford, 0·11; Belfast county borough, 0·11; Roscommon, 0·12; Dublin county borough, 0·12; Waterford county and county borough, 0·13; Louth, 0·14; Cork county and county borough, 0·14; Kildare, 0·15; Westmeath, 0·15; Queen's, 0·16; Armagh, 0·16; Carlow, 0·17; Mayo, 0·18; Dublin county, 0·22; Wexford, 0·22; Galway, 0·22; King's, 0·23; Meath, 0·23; Antrim, 0·24; Down, 0·29; Monaghan, 0·29; Limerick county and county borough, 0·30; Wicklow, 0·31; Tipperary, N.R., 0·33; Tyrone, 0·34; Cavan, 0·36; Fermanagh, 0·36; Leitrim, 0·38; Sligo, 0·44; Londonderry county and county borough, 0·46; Kilkenny, 0·52; and Donegal, 0·71.

Among the 493 deaths of males from influenza, 324 (or 66 per cent), and among the 521 deaths of females 381 (or 73 per cent), were those of persons aged 55 years or upwards.

DYSENTERY.—To dysentery 20 deaths were attributed, being 3 under the number for the preceding year, and 5 under the average for the ten years, 1906–15.

DIARRHŒA AND ENTERITIS (Deaths of Children under 2 years).—Deaths from these causes which fell from 1,992 in 1913 to 1,424 in 1914, and to 1,199 in 1915, further fell to 1,141 in 1916 as compared with an average of 1,418 for the decennial period, 1906–1915. These 1,141 deaths form 12 per cent. of the total deaths from all causes of children under 2 years of age.

As observed in reports for previous years, a large proportion of deaths from diarrhœa and enteritis occur in the unions containing the six county boroughs of Ireland. Though the latter form only 26 per cent. of the total population of the country, according to the Census of 1911, yet the deaths of such children in the year 1916 in the unions referred to amount to 731, or 64 per cent. of the total number for Ireland. In the union of Belfast 231 deaths of children from diarrhœa and enteritis were registered; in Dublin, South, 189; in Dublin, North, 185; in Cork, 53; in Londonderry, 38; in Waterford, 22; and in Limerick, 13.

During the year 1915, the total number of deaths coming under this heading in the above-mentioned unions was 810, or 68 per cent. of the total for Ireland.

OTHER EPIDEMIC DISEASES.—Among them are 5 from varicella, 2 from mumps, and 4 from German measles.

In the year 1915 there were 9 from varicella, 10 from mumps, and 2 from German measles.

SYPHILIS.—There were 71 deaths (of males, 44, and of females, 27), registered as from this cause. Of the 71 deaths, 46 (26 of males, and 20 of females) were those of infants under one year of age. In the year 1915, the number of deaths from syphilis was 90, as compared with 116 in 1914.

Deaths from locomotor ataxy numbered 45 (of males 38 and of females 7), deaths from general paralysis of the insane, 95 (of males, 82, and of females, 13), and deaths from aneurysm, 37 (of males, 31, and of females, 6). In 1915 there were 44 deaths from locomotor ataxy, 83 from general paralysis of the insane, and 21 from aneurysm.

Particulars as to ages, &c., will be found in the abstracts, commencing on page 36.

ERYSIPELAS.—From this cause 59 deaths were registered during the year 1916, and of these 27 were deaths of males, and 32 of females, as compared with a total of 55 in 1915, the males numbering 32 and the females 23.

PYÆMIA, SEPTICÆMIA.—To pyæmia 24 deaths were ascribed, and to septicæmia, 108 deaths, as against 17 and 118 respectively, in 1915. The 24 deaths from pyæmia include 16 of males and 8 of females and the 108 deaths from septicæmia comprise 58 of males and 50 of females.

No death from vaccinia was recorded during the year 1916.

Printed image digitised by the University of Southampton Library Digitisation Unit

TUBERCULOSIS.

The number of deaths from all forms of tuberculous disease registered in Ireland during the year 1916 was 9,323, being equivalent to 2·15 per 1,000 of the population.

With three exceptions (the year 1912, in which the rate was also 2·15, the year 1913, in which year the rate was 2·14, and the year 1914, during which the mortality from tuberculosis fell to 2·07 per 1,000), the rate for the year 1916, was the lowest recorded for Ireland.

From 1904 to 1914 there has been a continuous decrease, year by year, in the number of deaths from tuberculous disease in the country, but during the year 1915 the number rose to 9,525, as compared with 9,089 in 1914, 9,387 in 1913, and 9,437 in 1912.

In 1904, the deaths amounted to 12,694 or 2·88 per 1,000 of the population, being 3,371 in number, or 0·73 per 1,000 of the population, above the mortality for 1916. Thus, taking into account the decrease in the population, the mortality from tuberculous disease in Ireland in the year 1916 is 25·3 per cent. less than in 1904. It is 8·1 per cent. less than the average for the ten years 1906–1915, and 19·5 per cent. less than the rate for 1906, the first year of the decennial period referred to.

The rate for tuberculous disease in England and Wales during the year 1916, among the civil population, was 1·53 per 1,000, and for Scotland, 1·59 per 1,000 of the total estimated population, as compared with 2·15 per 1,000 for Ireland. The corresponding rates for 1915 were 1·52, 1·63, and 2·20, respectively.

The 9,323 deaths in Ireland during the year 1916 include 4,677 of males and 4,646 of females, the deaths of males being 208 below, and the deaths of females 6 above, the number recorded in 1915.

As regards the males, the rate for tuberculous disease in 1916 was 2·19 per 1,000 of the estimated male population, being 0·15 per 1,000 below the average for the preceding ten years, and among the female population, the rate was 2·11 per 1,000, or 0.23 per 1,000, under the average for the ten years, 1906–19. It would appear that the decrease in the male mortality in 1916 as compared with the decennial average was equivalent to 6·4 per cent. while among the females, the decrease in the mortality amounted to 9·8 per cent.

A comparison of the mortality from tuberculosis in 1916 with the ten years preceding is afforded by the following table:—

Year.	Males.		Females.		Total.		Decrease.	
	Number of Deaths.	Rate per 1,000 of the Male population.	Number of Deaths.	Rate per 1,000 of the Female population.	Number of Deaths.	Rate per 1,000 of the population.	Number.	Per cent.

* Increase as compared with 1914.

The deaths from tuberculosis registered in the province of Leinster during the year 1916, numbered 2,941, being 163 under the number for 1915; in Munster they numbered 2,125 in 1916, or 71 under those recorded for 1915; in Connaught the number registered in 1916 was 914, or 48 under the number for 1915; while in the province of Ulster such deaths amounted to 3,343, being 80 above the number registered in the year 1915.

Printed image digitised by the University of Southampton Library Digitisation Unit

The county or county borough areas showing increases in 1916 as compared with 1915 are as follows :—Carlow county, 76 deaths in 1916, showing an increase of 34 ; Longford, 58 deaths, increase, 14 ; Meath, 134 deaths, increase, 28 ; Queen's county, 107 deaths, increase, 24 ; Tipperary, S.R., 183 deaths, increase, 27 ; Armagh, 228, increase, 18 ; Cavan county, 106, increase, 4 ; Donegal, 297, increase, 30 ; Down, 503, increase, 44 ; Fermanagh, 89 deaths, increase, 12 ; Galway, 335, increase, 3 ; and Sligo, 125 deaths, increase, 3.

In the following county or county borough areas decreases in 1916 as compared with 1915 are shown :—Dublin county, 577 deaths in 1916, decrease, 12 ; Dublin county borough, 1,067 deaths, decrease, 136 ; Kildare county 134 deaths, decrease, 6 ; Kilkenny, 133 deaths, decrease, 2 ; King's county, 115 deaths, decrease, 11 ; Louth, 104 deaths, decrease, 28 ; Westmeath, 105 deaths, decrease, 16 ; Wexford, 230 deaths, decrease, 3 ; Wicklow, 101 deaths, decrease, 49 ; Clare, 158 deaths, decrease, 20 ; Kerry, 280 deaths, decrease, 14 ; Limerick county and county borough, 312 deaths, decrease 42 ; Tipperary N.R., 104 deaths, decrease, 3 ; Waterford county and county borough, 177 deaths, decrease, 19 ; Antrim county, 469 deaths, decrease, 3 ; Belfast county borough, 1,051 deaths, decrease, 5 ; Londonderry county and county borough, 289 deaths, decrease, 13 ; Monaghan county, 88 deaths, decrease, 6 ; Tyrone, 223 deaths, decrease, one ; Leitrim, 70 deaths, decrease, 9 ; Mayo, 266 deaths, decrease, 38 ; and Roscommon, 118 deaths, decrease, 7. In Cork county and county borough the deaths from tuberculous disease in each of the years 1916 and 1915, numbered 911.

Of the total increases in the counties 187, or 78 per cent., related to the following counties :—Down, Carlow, Donegal, Meath, Tipperary, S.R., and Queen's county.

Of the total decreases, 332, or 75 per cent., were contributed by the following areas :—Dublin county borough, Wicklow county, Limerick county and county borough, Mayo county, Louth county, Clare county, and Waterford county and county borough.

According to the Yearly Summaries of the Weekly Returns, it would appear that the death rate from tuberculosis among the " Professional and Independent Class " in the Dublin Registration Area in 1916 was 0·96 per 1,000 of the population (Census, 1911), as against 1·84 per 1,000 in 1915 ; among the " Middle Class," the deaths in 1916 was 1·96 per 1,000 in 1916, as compared with 2·18 per 1,000 in 1915 ; among the " Artizan Class and Petty Shopkeepers," it was 2·82 per 1,000 in 1916 in comparison with 3·11 per 1,000 in 1915 ; and among the " General Service Class," the mortality from tuberculous disease in 1916 was 3·33 per 1,000, while in 1915 the ratio was 3·61 per 1,000 of the population.

Of the 9,323 deaths from tuberculous disease registered in Ireland, during the year, 7,342 were attributed to pulmonary tuberculosis, 668 to tuberculous meningitis, 493 to abdominal tuberculosis, and 820 to other forms of tuberculous disease.

Pulmonary Tuberculosis.—The 7,342 deaths under this heading comprise 4,354 deaths returned as from pulmonary tuberculosis, 2,561 as from phthisis, 323 as from tuberculosis—not otherwise defined, 68 as from acute phthisis, and 36 as from acute miliary tuberculosis. They constitute 79 per cent. of all the deaths from tuberculous disease, and afford a rate of 1·69 per 1,000 of the population. In 1911 such deaths numbered 7,584, in 1912 they were 7,452, in 1913 they were 7,366, in 1914 they were 7,163, and in 1915 they numbered 7,547.

Of the 7,342 deaths, 3,680 (or 1·72 per 1,000 of the male population) were those of males and 3,662 (or 1·67 per 1,000 of the female population), were those of females, the mortality rates for pulmonary tuberculosis among the males and female population in 1915, being 1·81 and 1·67 respectively.

In 1916, the deaths from pulmonary tuberculosis include those of 5,291 persons between 15 and 45 years of age, representing 72·1 per cent. of the total number of deaths from this cause, as against 5,498 deaths in 1915 with a percentage of 72·9. Deaths in 1916 of persons under 15 years of age numbered 584, or 7·9 per cent. of the total, as compared with 561 deaths, or 7·4 per cent. in 1915. In 1916 among persons aged 45 years and upwards, the deaths amounted to 1,467, or 20·0 per cent. of all deaths from pulmonary tuberculosis ; and for the preceding year, the deaths at these ages numbered 1,488, or 19·7 per cent. of the total.

Printed image digitised by the University of Southampton Library Digitisation Unit

The deaths from pulmonary tuberculosis of children under 5 years of age amounted to 162, representing 0·38 per 1,000 of the population at this age-period, between 5 and 10 years the deaths were 127, or 0·29 per 1,000; between 10 and 15 they numbered 295, or 0·70 per 1,000; at ages between 15 and 20 the number was 885, or 2·12 per 1,000; between 20 and 25 years the number was 1,034, or 2·78 per 1,000; between 25 and 35, it was 1,873, or 2·98 per 1,000; between 35 and 45 it was 1,499, or 2·83 per 1,000; between 45 and 55, it was 849, or 2·18 per 1,000; between 55 and 65 it was 431, or 1·54 per 1,000; between 65 and 75, it was 167, or 0·54 per 1,000; and at the age-period, 75 years and upwards, the number of deaths was 20, equivalent to a rate of 0·16 per 1,000 of the population at this age-period.

In the province of Leinster during the year 1916 there were 2,292 deaths from pulmonary tuberculosis registered, representing 1·97 per 1,000 of the population of the province according to the Census of 1911, as compared with 2,445 deaths and a rate of 2·10 per 1,000 in 1915. The deaths in the province of Munster in 1916 were 1,728, affording a rate of 1·67 per 1,000 of the population, as against 1,801 deaths, equivalent to a rate of 1·74 per 1,000 in 1915. In Ulster during the year 1916, the deaths numbered 2,551, being equal to 1·61 per 1,000, the deaths in 1915 amounting to 2,475, or 1·56 per 1,000. The deaths from pulmonary tuberculosis registered in the province of Connaught during the year 1916 numbered 771, or 1·26 per 1,000, while during the year 1915 they numbered 826, affording a rate of 1·35 per 1,000 of the population.

Tuberculous Meningitis.—The deaths (668) from this cause in 1916 represent a rate of 0·15 per 1,000 of the population. In 1911 they numbered 660, or 0·15 per 1,000; in 1912, the number was 637, or 0·15 per 1,000; in 1913, it was 627, or 0·14 per 1,000; in 1914, it was 609, or 0·14 per 1,000; 1915, the number was 690, or 0·16 per 1,000 of the population. Of the deaths in 1916 of 668 persons, 330 were deaths of males and 338 were those of females. The male mortality includes 125 of children under 5 years of age, this number being 37·9 per cent. of the deaths of males and representing a rate of 0·58 per 1,000 of the number of the estimated number of male children in the population, the deaths of females including 121 of children under the age of 5 years, the ratio of the latter to the deaths of females at all ages, being 35·8 per cent., and the rate per 1,000 of the female population under the age of 5 years, represented by these deaths, 0·56. In the year 1915, the corresponding rate of mortality, for male children was 0·86 per 1,000 and for females 0·64 per 1,000.

Abdominal Tuberculosis.—This title includes 74 deaths returned as from tabes mesenterica, 246 from tuberculous peritonitis, 103 from tuberculous enteritis, and 70 as from other abdominal tuberculosis, in all 493 deaths, affording an annual rate of 0·11 per 1,000, of the population as compared with an average of 483 deaths, and a mean rate of 0·11 per 1,000 for the preceding ten years, 1906–15.

Of the 493 deaths, 235 were those of males and 258 of females, the deaths of male children under 5 years of age numbering 83, or 35·3 per cent. of the deaths of males at all ages and the deaths of female children, 72, or 27·9 per cent. of the total number of deaths of females.

Other Forms of Tuberculous Disease.—Deaths returned under this heading which were 828 in 1911, 861 in 1912, 871 in 1913, 772 in 1914, and 744 in 1915, numbered 820, equivalent to 0·19 per 1,000 of the population, in 1916.

The 820 deaths (432 of males and 388 of females), include 112 deaths from tuberculosis of the spinal column, 134 from tuberculosis of joints, 8 from lupus, 16 from scrofula, 126 from tuberculosis of other organs, and 424 from disseminated tuberculosis.

Cancer.—The deaths attributed to cancer during the year 1916 amounted to 3,938, affording a rate of 0·91 per 1,000 of the population. The 3,938 deaths comprise 1,488 returned as from carcinoma, 183 from sarcoma, and 2,267 from cancer, malignant disease, not otherwise defined, and include 1,897 deaths of males and 2,041 of females. These 3,938 deaths are 323 above the average number (3,615) registered during the preceding ten years and 112 above the number, 3,826, for the year 1915, and, in fact, the mortality from cancer in 1916 is the highest yet recorded for Ireland.

Printed image digitised by the University of Southampton Library Digitisation Unit

Table IX., opposite, gives particulars regarding deaths from cancer, showing ages, sexes, and the parts of the body affected by the disease.

The 1,897 deaths of males represent a rate of 0·89 per 1,000 of the male population, the 2,041 females being equal to a rate of 0·93 per 1,000 of the number of females in the population.

Only 17 of the deaths from cancer among the males and 19 among the females were those of persons under 25 years of age. The mortality among males was highest at the age-period, 75 years and upwards, viz., 4·78 per 1,000 of the male population at these ages; the age-period, 65 and under 75 years, comes next with a rate of 4·48 per 1,000, followed by the age-period, 55 and under 65, the rate for which was 3·73 per 1,000 of the male population at this age-period. Among the females the mortality from this cause at the age-period, 75 years and upwards, was 4·14 per 1,000 of the female population at these ages; for the age-period, 55 and under 65 years, the rate was 3·47 per 1,000, and for the age-period, 65 and under 75 years, the rate was 3·37 per 1,000 of the female population at these ages.

Of the 1,897 deaths of males, 1,412, or 74·4 per cent., were of persons aged 55 years and upwards, 435, or 22·9 per cent, between 35 and 55 years, and only 50, or 2·7 per cent., were deaths of persons under 35 years of age.

The 2,041 deaths of females include 1,349 deaths of persons aged 55 years and upwards, or 66·1 per cent.; 630, or 30·9 per cent., at the age-period 35 and under 55 years; and 62 deaths, or 3·0 per cent., were those of persons under 35 years of age.

Among deaths of males there were during the year, 496 deaths from cancer of the stomach, 214 of the liver, 139 of the intestine, 136 of the rectum, and 106 of the tongue, the aggregate of these deaths amounting to 1,091, or 57·5 per cent. of the total. In the cases of 437 deaths of females the seat of the disease was the stomach; in 251 cases it was the liver; in 170, the intestine; in 93, the rectum; and in 16 cases only was cancer of the tongue returned as the cause of death. These deaths of females number 967, or 47·4 per cent. of all deaths of females from cancer. Cancer of the breast among females caused 335 deaths, and cancer of the uterus, 234, the total (569), forming 27·9 per cent. of all the deaths of females from this disease. There were only 6 deaths of males from cancer of the breast.

TUMOURS (NON-MALIGNANT).—Tumours (not including those of the brain, uterus, or ovary), caused the deaths of 21 males and 29 females during the year 1916. In all these cases the tumours were not malignant, or further information concerning their nature was not available. The details regarding the parts affected were as follows :—

PARTS AFFECTED.	MALES.	FEMALES.	PARTS AFFECTED.	MALES.	FEMALES.

RHEUMATISM.—Deaths assigned to rheumatic affections during the year 1916, include 255 deaths (of males 118, and of females, 137), from rheumatic fever or acute rheumatism, 394 (of males, 147, and of females, 247), from chronic rheumatism, 7 (of males, 3, and of females, 4), from osteo-arthritis, 4 (3 of males, and one of a female), from rheumatic gout, and 7 (of males, 5, and of females, 2) from gout.

In 1915 deaths attributed to rheumatic fever or acute rheumatism numbered 276 ; to chronic rheumatism, 413 ; to osteo-arthritis, 3 ; to rheumatic gout, 4 ; and to gout, 16.

DIABETES.—There were 387 deaths from this cause, the deaths of males being 220 and of females, 167. For the preceding year the corresponding figures were 405, 239, and 166 respectively.

OTHER GENERAL DISEASES.—Among these causes, tetanus, accounted for 38 deaths, anthrax (splenic fever) for 2 and mycoses for 2. During the preceding year there were 33 deaths from tetanus, one from anthrax and one from mycoses.

ALCOHOLISM.—Ninety-four deaths were assigned to alcoholism, 86 being those of males, and 8 of females. In the three preceding years, 1913–15, the deaths assigned to this cause numbered 133, 130, and 102, respectively.

In addition to 94 deaths in 1916 referred to alcoholism, there were 243 deaths (of males 165, and of females, 78) from cirrhosis of the liver, the number of such deaths being 272 in 1913, 299 in 1914, and 269 in 1915.

MENINGITIS.—Deaths from meningitis and encephalitis during the year 1916 numbered 622, affording a rate of 0·14 per 1,000 of the population. In the three preceding years, deaths from these causes were respectively, 632, 592, and 667, with an average of 677 for the ten years, 1906-15.

Of the 622 deaths in 1916, those of males numbered 347, and of females, 275.

CEREBRO-SPINAL FEVER.—During each of the years 1913 and 1914, deaths returned under this heading numbered 16, but during the year 1915, they rose to 141, followed by 63 in 1916, the latter comprising 39 deaths of males, and 24 of females.

Of the 63 deaths, 45 were those of persons under 25 years of age, only 9 being under 5 years old.

POLIOMYELITIS.—The number of deaths attributed to poliomyelitis, infantile paralysis, during the year 1916 was 44, as against 30 in 1913, 47 in 1914, and 24 in 1915. Of the 44 deaths in 1916, those of males numbered 18 and of females, 26.

Printed image digitised by the University of Southampton Library Digitisation Unit

In the following statement details of the latter as regards age at death are given:—

—	All Ages.	Under 1 year.	1–	2–	3–	4–	5–10	10-15	15-20	20-25	25-35	35-45	45 years & upwards
Males ...	18	1	2	3	3	–	4	–	3	–	1	–	1
Females ...	26	1	2	4	4	2	5	2	1	–	4	–	1
Total ...	44	2	4	7	7	2	9	2	4	–	5	–	2

From this statement it would appear that exactly half the 18 deaths of males and the 26 deaths of females were those of children under 5 years of age; 4 deaths of males and 5 of females were aged 5 and under 10 years, the deaths under 10 years of age amounting to 31, or more than 70 per cent. of the total number of deaths from poliomyelitis—infantile paralysis—in Ireland.

Locomotor Ataxy.—Forty-five deaths (38 of males, and 7 of females) were ascribed to locomotor ataxy, as compared with 35 (30 of males and 5 of females) in 1913; 31 (24 of males, and 7 of females) in 1914; and 44 (40 of males, and 4 of females) in 1915.

General Paralysis of the Insane.—To this cause 95 deaths were assigned, the deaths of males numbering 82 and of females, 13, as compared with 100 (males, 77, and females, 23) in 1913; 103 (88 of males, and 15 of females) in 1914, and 83 deaths (74 of males, and 9 of females), in 1915.

Epilipsy.—There were 305 deaths recorded during the year 1916 as from epilepsy; of these, 164 were deaths of males, and 141 of females, as compared with a total of 276 in 1913, 260 in 1914, and 333 in 1915.

Convulsions.—Deaths ascribed to this cause amounted to 1,119, comprising 617 deaths of males, and 502 of females, as against 1,237 in 1915. Of the 1,119 deaths, 892, or about 80 per cent., were those of infants under one year old, and constitute about 12 per cent. of all the deaths in Ireland of infants under one year of age.

Cerebral Tumour.—Resulting from the supplementary inquiries into cases of cerebral tumour, the residue of deaths from this cause amounted, in the year 1916, to 43 (23 of males and 20 of females), as compared with 42 in 1913, 53 in 1914, and 23 in 1915.

Of 60 deaths registered in 1916 as being due to cerebral tumour, 9 were ascertained to have been caused by tuberculous meningitis, 4 by syphilis, 3 by malignant disease, one by aneurysm, and in 43 instances, as above stated, the cause of the tumours could not be ascertained.

Diseases of the Heart.—Eleven per cent. of the deaths from all causes were due to these diseases, the deaths so reported amounting to 8,082, equivalent to a rate of 1·86 per 1,000 of the population, as against an average for the ten years, 1906–15, of 8,432, and an annual rate of 1·93 per 1,000, the corresponding figures for 1915 being 8,411, and 1·94 per 1,000, respectively.

The total deaths from diseases of the heart in 1916 comprise 3,960 males and 4,122 females, and include 7,803 deaths from organic diseases of the heart (of which 2,564 were from valvular disease, 253 from dilatation, 209 from cardiac dropsy, 206 from fatty degeneration, 14 from hypertrophy, and 4,557 from other organic diseases), 166 from acute endocarditis (16 from acute myocarditis, 23 from infective endocarditis, and 127 from other acute endocarditis), 81 from angina pectoris, and 32 from pericarditis.

Laryngitis.—To laryngitis, 125 deaths were attributed, and to laryngismus stridulus, 15 deaths, as compared with 106 and 10, respectively in 1915.

Bronchitis.—Acute and chronic bronchitis accounted for the deaths of 5,873 persons (2,732 males and 3,141 females) during the year 1916. This number, forming over 8 per cent. of the deaths from all causes registered in Ireland, and yielding a rate of 1·35 per 1,000 of the population, is, however, 1,333, or 18·5 per cent., under the number recorded for 1915, and 1,226, or 17·3 per cent., under the average for the ten years, 1906-1915.

Pneumonia.—Deaths from pneumonia, which numbered 3,948 in 1913, 3,846 in 1914, and 4,330 in 1915, fell to 3,701, affording a rate of 0·85 per 1,000 of the population, in 1916. These 3,701 deaths (of males, 2,096, and of females, 1,605) are 374 under the average (4,075) for the ten years, 1906-15, and comprise 1,300 deaths

Printed image digitised by the University of Southampton Library Digitisation Unit

from broncho-pneumonia, 399 from lobar pneumonia, and 2,002 from pneumonia (type not distinguished), the corresponding figures for 1915 being 1,633, 494 and 2,203, respectively.

PLEURISY, EMPYEMA.—Of 143 deaths assigned to pleurisy in 1916, those of males numbered 95 and of females, 48; the latter including the deaths of 10 males and 2 females registered as from empyema, regarding which special inquiry either associated them with pleurisy or failed to elicit any information respecting the cause of empyema.

During the 13 years, 1904–16, there were registered in Ireland the deaths of 378 persons (272 males and 106 females) as from empyema. Resulting from the special inquiry as regards the 272 deaths of males, 78 were transferred to tuberculous disease, 28 to pneumonia (6 to lobar pneumonia, 6 to broncho-pneumonia, 2 to pleuro-pneumonia, and 14 to pneumonia, type not stated), 4 were assigned to injury, 3 to influenza, 2 each to enteric fever and hepatic abscess, and 9 to other causes. Twenty-four cases were stated to be associated with pleurisy.

The investigation into the 106 deaths of females resulted as follows:—33 were transferred to tuberculous disease, 12 to pneumonia (7 to lobar pneumonia, 2 to broncho-pneumonia, and 3 to pneumonia, type not stated), in 3 cases influenza was ascribed as the origin, and in 4 cases other causes were assigned. In 10 instances pleurisy was ascribed as the cause.

As regards 122 deaths of males, and 42 of females, the causes of death originating empyema could not be ascertained.

GASTRIC ULCER.—Deaths from this disease numbering 308, 312, and 297, respectively, in the three years, 1913-15, fell to 291 in 1916, the latter comprising143 deaths of males and 148 of females. Of the 291 deaths 59 per cent. were those of persons 35 and under 65 years of age.

DUODENAL ULCER.—To duodenal ulcer, 66 deaths (51 of males and 15 of females) were attributed, as against 44, 52 and 58 in the three preceding years.

APPENDICITIS, PERITYPHLITIS.—Under this heading 188 deaths (of males, 109 and of females, 79), were returned. In 1913 such deaths numbered 215, in 1914 they were 202, and in 1915 they amounted to 213.

CIRRHOSIS AND OTHER DISEASES OF THE LIVER.—During the year 1916, the deaths referred to cirrhosis of the liver number 243, and of these 165 were deaths of males and 78 of females, as compared with a total of 272 in 1913, 299 in 1914, and 269 in 1915. There were 7 deaths, from acute yellow atrophy, one from hydatid tumour, 45 from biliary calculi, and 195 from other diseases of the liver in 1916.

PERITONITIS.—Resulting from supplementary inquiries as regards deaths registered as from peritonitis, the deaths from this cause have been reduced to 80 (50 of males and 30 of females) for the year 1916, as compared with 77 in 1915, 89 in 1914, and 88 in 1913.

Of the total number of deaths (163) registered as from this condition, 83 were assigned to other causes, including 16 to appendicitis, 13 to tuberculous peritonitis, 9 to intestinal obstruction, 8 to gastric ulcer, 4 to puerperal septicæmia, 3 to hernia, 3 to diseases of the uterus and 2 each to phthisis, malignant disease of stomach, intestinal ulceration and duodenal ulcer.

DISEASES OF THE KIDNEYS.—To this group 1,752 deaths, representing a rate of 0·40 per 1,000 of the population, were attributed, the deaths of males amounting to 954, and those of females to 798. Deaths from these causes fell from 1821 in 1913, to 1,720 in 1914, and to 1,662 in 1915. The 1,752 deaths in 1916 are 90 above those recorded for 1915 and are 121 above the average for the ten years, 1906-1915. Included in the mortality for 1916 are 422 deaths from acute nephritis, 1,172 from chronic Bright's disease, 70 from uræmia, and 88 from other diseases of the kidneys.

DISEASES AND ACCIDENTS OF PREGNANCY AND CHILDBIRTH.—The total number of deaths returned as having been caused by or associated with pregnancy or child-bearing during the year 1916 was 554, comprising (1) 212 from puerperal septic conditions, (2) 292 from diseases and accidents of pregnancy or child-bearing; and (3) 50 deaths not classed to pregnancy or child-bearing, but returned as associated therewith.

Table XA. gives this information in detail for the year 1916: Table XB. supplies a comparison of the mortality for 1916 with each of the ten preceding years; while Table XC. furnishes by provinces, counties and county boroughs the mortality in the year 1916, in comparison with the average for the five preceding years, as regards puerperal septic diseases and diseases and accidents of pregnancy and child-bearing.

The latter table amplifies the information on this subject as given in reports for previous years.

From Table Xb, it will be observed that the rate represented by the deaths from puerperal septic diseases and diseases and accidents of pregnancy and childbirth during the year 1916, viz., 5·51 per 1,000 births, is 0·22 per 1,000 above the average (5·29) for the preceding ten years, and is, with the exception of that for the year 1906, higher than the rate for any of those years. The rate (5·51 per 1,000 births) in 1916 comprises 2.32 from puerperal septic diseases, and 3·19 from diseases and accidents of pregnancy and childbirth, the former being 0·33 above, and the latter 0·11 below, the average for the preceding ten years,

Printed image digitised by the University of Southampton Library Digitisation Unit

Table Xc shows this information for 1916, as compared with the average for the five years 1911-15, by provinces, counties, and county boroughs.

In connection with the county and county borough figures for 1916 as shown in this table it is well to bear in mind that in consequence of the small numbers of deaths in the cases of some of the counties and county boroughs, the rates given for that year, as an indication of the true mortality, except taken in conjunction with results for the preceding five years, must be received with caution.

The provinces of Munster, Ulster and Connaught show increases in the mortality rates for 1916 as compared with the preceding five years, while Leinster shows a decrease. The highest provincial rate is that for Connaught both for 1916 and for the five years preceding, viz., 6·86 and 5·82 per 1,000 births, showing an increase in 1916 of 1·04 per 1,000, or about 18 per cent. The lowest provincial rate is in Leinster which was 4·80 per 1,000 births in 1916, as against an average of 4·93 per 1,000 for the five years 1911–15.

During the five years, 1911–15, the mortality from puerperal septic diseases and diseases and accidents of pregnancy and childbirth was highest in the following counties :—

Monaghan (8·29 per 1,000 births) ; Longford (7·13) ; Leitrim (6·98) ; Tyrone (6·81) ; Westmeath (6·79) ; Armagh (6·76) ; and Mayo (6·66).

The counties having the lowest average mortality were as follows :—Dublin county (2·99) ; Waterford (4·30) ; Tipperary, N.R. (4·36) ; Galway (4·70) ; Kilkenny (4·83) ; Louth (4·96) ; and King's County (4·98).

For the county boroughs the average rates varied from 3·98 for Belfast to 5·58 for Londonderry, the mortality for Cork being 4·34 per 1,000 births, for Dublin, 4·46 ; for Waterford, 4·69 ; and for Limerick, 5·32.

The figures for the county boroughs relating to the year 1916, show that the rate for Waterford is the lowest, viz., 3·50 per 1,000 births, and Londonderry, the highest, with a rate of 7·78 per 1,000 ; the rate for Belfast is 3·78 ; for Dublin, 4·55 ; for Cork, 5·51 ; and for Limerick, 5·52 per 1,000.

The highest mortality in 1916 occurred in the following counties :—Carlow (11·03) ; Donegal (10·06) ; Kilkenny (9·28) ; Limerick (9·25) ; Tyrone (8·52) ; and Galway, 8·32.

The counties showing the lowest rates in 1916 were :—Wicklow (1·70) ; Tipperary, S.R. (2·35) ; Meath (2·38) ; Dublin (2·53) ; Londonderry (2·58) ; and Monaghan (2·94).

VIOLENCE.—The number of deaths registered in Ireland during the year 1916, as having been caused by violence in its various forms was 2,265, in comparison with 1,955 in 1915, and an average of 1,880 for the ten years 1906–1915.

The 2,265 deaths in 1916 comprise 32 cases of homicide, 107 of suicide, and 2,126 other deaths by violence, including accidental cases.

Among the latter are 397 (199 being those of children under 5 years of age) from burns or scalds (conflagrations excepted) ; 382 caused by drowning (80 of these being due to the sinking of the s.s. "Connemara," and the s.s. "Retriever," after collision in Carlingford Lough); 59 deaths were caused by excessive cold, 58 by absorption of deleterious gases, 16 by acute poisonings, 13 by effects of heat and 11 by conflagrations.

Of the 32 homicidal cases, 22 were deaths of males and 10 of females ; the 107 homicidal cases comprise 85 deaths of males and 22 of females ; and of the 2,126 other deaths by violence, 1,527 were those of males, and 599 of females.

Included in the latter are 412 deaths registered as having been caused by wounds received during the Rebellion of Easter Week. Among them are 315 deaths of civilians, and 97 of military and police, the 315 deaths among the civil population comprising 263 of males and 52 of females. Only 4 of the deaths by execution, following trials by courts-martial, were registered during the period up to 31st December last.

The total number of deaths from poisons or poisonous gases, whether industrial or otherwise, registered during the year was 47, the accidental cases numbering 41 and the suicidal 6, no death by poison homicidally inflicted having been reported. Of the accidental deaths 32 were those of males and 9 of females and of the suicidal 4 were those of males and 2 of females. Among the 32 accidental deaths of males, 5 were caused by ptomaine poisoning, 5 by lead, 3 by gas, 2 each by laudanum, carbon monoxide, coal gas, alcohol, and carbonic acid gas, and one death each by strychnine, methylated spirit, Jeyes' fluid, liquor creosolus sapolatus, cresol, salt of copper, sedative, irritant gas, and chloroform (operation).

Printed image digitised by the University of Southampton Library Digitisation Unit

Of the 9 deaths of females, attributed to accidental poisoning, 3 were caused by ptomaine poisoning, and one death each by oxalic acid, carbolic acid (possibly), corrosive poison, gas, laudanum, and aniline poison.

The 4 suicidal cases of poisoning among males include 2 deaths by strychnine, one by ammonia and one by phosphorus, and the two such deaths among females comprise one caused by oxalic acid, and one by belladonna and aconite.

Ill-defined Causes of Death.

The following terms, among others, should not be used where it is possible to employ a more definite nomenclature in describing the cause of death :—dropsy, syncope, sudden death, heart failure, atrophy, debility, marasmus, teething, pyrexia, old age.

During the year 1916, the deaths assigned to old age numbered 12,274 (of males 5,704 and of females, 6,570). These include 92 deaths (48 of males, and 44 of females), of persons aged 70 years and upwards returned as from syncope, and the deaths at this age-period of 836 persons (441 males and 395 females) registered as from heart failure.

Uncertified Causes of Death.

Of the total deaths registered (71,391) during the year 1916, no less than 16,317, or 22·9 per cent., were returned as uncertified, the corresponding percentage for 1915 being 22·7, and the average for the preceding ten years, 23·5.

Inquests.

As returned by the Registrars during the year 1916, the number of inquests was 1,533, or one inquest in every 47 deaths registered.

AGES AT DEATH.

Deaths of children under 5 years of age during the year numbered 11,873, or 16·6 per cent. of all the deaths registered during the year, the deaths of male children amounting to 6,390, or 17·8 per cent. of the total deaths of males, and the deaths of female children, 5,483, or 15·5 per cent. of the deaths of females at all ages.

There were 30,177 deaths of persons aged 65 years or upwards, being 42·3 per cent of the total deaths registered. Included therein are 24,981 deaths of persons aged 70 years or upwards, or 35·0 per cent. of all the deaths recorded during the year.

Among these deaths are 488 of persons aged 95 years or upwards, 209 being those of males, and 279 of females, including 100 deaths, comprising 45 of males, and 55 of females, whose ages at death were returned as 100 years or upwards.

The death rates per 1,000 of the population at each of the undermentioned age-periods, were as follows :—under 5 years, 27·6, per 1,000 ; 5 and under 10 years, 3·4 ; 10 and under 15 years, 2·8 ; 15 and under 20 years, 4·5 ; 20 and under 25 years, 5·6 ; 25 and under 35 years, 6·7 ; 35 and under 45 years, 9·5 ; 45 and under 55 years, 14·7 ; 55 and under 65 years, 27·7 ; 65 and under 70 years, 36·0 ; 70 and under 75 years, 50·9 ; and at the age-period, 75 years and upwards, the rate was 131·8 per 1,000 of the estimated number living at this age-period.

INFANT MORTALITY.

During the year 1916, there were registered in Ireland the deaths of 7,627 infants under one year of age, which number is equivalent to 83 in every 1,000 births registered, as compared with 92 per 1,000 in 1915, and an average of 92 for the 10 years, 1906–15. The mortality for 1916 is the lowest rate recorded for Ireland.

The deaths of infants under one year old in 1916 include 4,238 males and 3,389 females, the former number being equal to 90 per 1,000 births of males, the latter affording a rate of 77 per 1,000 births of females. The corresponding infant mortality rates for 1915 were 100 and 83 respectively.

In 1916 the rate for deaths of infants under one year of age in England and Wales was 91 per 1,000 births, as compared with 110 per 1,000 in 1915, the respective rates for Scotland being 97 and 126 per 1,000 births registered.

Table XI. gives the infant mortality for the whole of Ireland in each of the ten years, 1907-16, by certain causes, and in the case of 1916, by age periods and by sexes.

From this table it will be seen that, in comparison with 1915, the mortality for 1916 in the majority of causes shows decreases, the principal of which are pneumonia with a decrease of 2·03 per 1,000, bronchitis (decrease, 2·00), the group of developmental and wasting diseases (decrease, 1·72), convulsions (decrease, 0·84),

Printed image digitised by the University of Southampton Library Digitisation Unit

tuberculous disease (decrease, 0·57), influenza (decrease 0·55), diarrhœa and enteritis (decrease, 0·31), measles (decrease, 0·29), and diphtheria and croup (decrease, 0·26).

The principal increase was in deaths from whooping-cough, the mortality per 1,000 births being 1·03 per 1,000 higher in 1916 than in 1915.

Table XII. gives the infant mortality by causes, sexes, and age-periods, represented by deaths of infants *registered* during the year 1916 in the Registrars' districts containing towns of over 10,000 inhabitants—"Nineteen Town Districts."

The following is a summary of these particulars as compared with the remainder of the country and with Ireland as a whole, with corresponding figures for 1915:—

AGES.	Infant Mortality, 1916—Deaths under one year per 1,000 Births, registered

6–12 " ...	38·44	41·42	35·33	15·26	16·93	13·47	22·58	24·60	20·43
Under one year ...	136·04	146·77	124·83	71·06	77·97	63·65	91·57	99·51	83·13

The aggregate infant mortality rate for the "Nineteen Town Districts" in 1916 was 120·91 per 1,000 births registered, as compared with 136·04 in 1915. For the remainder of the country the rate in the former year was 66·94, as against 71·06 in 1915. Thus the rate for the town districts is 15·13 per 1,000, or 11·1 per cent., less than that for 1915, while the mortality among infants in the remainder of Ireland is 4·12 per 1,000, or 5·8 per cent., less than that which prevailed in the year 1915.

Relatively speaking for every 100 deaths of infants in the "Nineteen Town Districts," according to records of the year 1916, only 55 occurred in the remainder of the country, and it may be stated that if the rate for the latter (66·94 per 1,000 births) related also to the "Nineteen Town Districts" the lives of 1,506 infants would have been saved during the year 1916.

According to the Yearly Summaries of the Weekly Returns furnished by the Registrars, the infant mortality rates (corrected for births and deaths in institutions) for the "Nineteen Town Districts" in 1916, with the increase or decrease as compared with the average rate per 1,000 births for the five years preceding were as follows:—Dublin Registration Area 153, decrease 10*; Belfast 113, decrease 23; Cork 105, decrease 22; Londonderry 93, decrease 17; Limerick 112, decrease 2; Waterford 140, same as five years' average; Galway 117, increase 4; Dundalk 97, decrease 20; Lurgan 76, decrease 25; Drogheda 92, increase 13; Lisburn 142, increase 24; Newry 87, decrease 28; Portadown 121, increase 22; Wexford 113, increase 4; Ballymena 92, decrease 28; Sligo 118, increase 13; Kilkenny 59, decrease 36; Tralee 47, decrease 50; and Clonmel 113, increase 11.

During the year 1916, the infant mortality rate for London was 89 per 1,000 births and in 1915, it was 112; the rate for Liverpool in 1916 was 116 per 1,000 births and in 1915, the infant mortality was 132; the respective infant mortality rates in 1916 and 1915 for Glasgow was 111 and 143; and for Edinburgh, 100 and 132.

Table XIII. affords a comparison of the rates of infant mortality per 1,000 births in 1916 with 1915, represented by the deaths of infants under one year of age as *registered* in each county and county borough in Ireland.

* As compared with 1915 only in the case of Dublin; in all other cases the comparison of the figures for 1916 is made with those for the five years, 1911–15.

EMIGRATION.

According to the returns furnished to this Department by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1916 was 7,302, of whom 1,743 were males and 5,559 were females. Of the total emigrants, 1,515 were natives of the province of Leinster, 1,056 of Munster, 2,733 of Ulster, and 1,998 of Connaught.

Of the total emigrants, 13·8 per cent. were under 15 years of age, 73·4 per cent. were between 15 and 35 years old, and 12·8 per cent. were 35 years or upwards.

(*a*) Messrs. Boland's, Limited.

(*b*) Messrs Johnston, Mooney, and O'Brien's (Limited) 4-lb loaf *delivered*; the price in Messrs. Johnston, Mooney and O'Brien's shops, exclusive of delivery, was ½*d.* per 4 lb. loaf lower.

(*c*) Not including those relieved by means of works devised for the relief of distress, viz. :—an average of 1,062 in First Quarter, 7,199 in Second Quarter, and 2,645 in Third Quarter of 1908.

NOTE.—*The average prices of Oatmeal, Potatoes, and Beef given in the above Table have been kindly supplied by the Department of Agriculture and Technical Instruction for Ireland, and the number of persons receiving In-door and Out-door Relief by the Local Government Board*

It appears from the foregoing table that in the year 1906 the price of beef was lowest, when the average price was 53*s.* 9*d.* per cwt.; in the year 1906 bread was cheapest, when the average price (1st quality delivered) was 5½*d.* per 4 lb. loaf. Oatmeal (1st quality) was cheapest in 1911, in which year the average price was 13*s.* 8*d* per cwt.; and potatoes in 1906 and 1909, when the average prices were 2*s.* 9½*d.* and 2*s.* 10*d.* per cwt., respectively. During the year 1916 the prices of provisions were highest, the average price of Messrs. Boland's (Limited) 4 lb. loaf being 9¼*d.*, while that of Messrs. Johnston, Mooney, and O'Brien (Limited) was 9*d.* The average price of oatmeal (1st quality) was 22*s.* 6*d.* per cwt.; of potatoes, 6*s.* 2¾*d.* per cwt., and of beef, 97*s.* per cwt.

I have been favoured by the Commissioners of the Local Government Board for Ireland with the returns relating to Pauperism in Ireland, for which I desire to express my obligations. It appears from these returns (see Table XIV.) that the average number of workhouse inmates in Ireland on Saturdays during the year 1916 was 31,431, being a decrease of 1,277 when compared with the average for the preceding year; and that the average number of persons receiving out-door relief was 34,577, or 2,768 less than the corresponding number for 1915.

THE WEATHER.

The following information has been extracted from returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, M.A., M.D., D.PH., DUB.; D.SC., OXON.; F.R.C.P.I., F.R.MET. SOC., D.L., Hon. Physician in Ordinary to His Majesty the King in Ireland; and published in the monthly editions of the "Dublin Journal of Medical Science," from March, 1916, to February, 1917.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1916 was 29·853 inches. The highest observed reading was 30·512 inches at 9 A.M. on January 9th. The lowest observed reading was 28·502 inches at 9 A.M. on November 5th. The extreme range of atmospherical pressure was 2·010 inches, as compared with 2·451 inches in 1915.

The *Mean Temperature* of the air for the year was 49·8°. The highest reading was 75·6° on July 23rd, and the lowest reading was 26·4° on December 27th. The average mean temperature for the twenty years 1896–1915 was 50·2°.

Rain fell on 233 days, including snow or sleet on 28 days and hail on 47 days. The average annual number of rainy days in the years 1896-1915 was 201. The total rainfall measured 38·609 inches, compared with an average of 27·791 inches in the twenty years, 1896-1915. During the first half of 1916 (January to June, inclusive) the rainfall was 17·011 inches on 123 days; during the second half (July to December, inclusive) 21·598 inches fell on 110 days.

Reports on the Weather throughout Ireland during each quarter of the year 1916, as furnished by the Meteorological Office, are published in my Quarterly Returns of Marriages, Births, and Deaths for that year.

I have the honour to be,

Your Excellency's faithful Servant,

WILLIAM J. THOMPSON,

Registrar-General.

GENERAL REGISTER OFFICE,

CHARLEMONT HOUSE,

DUBLIN, *5th July*, 1917

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1916.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less *than the deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1911.	TOTAL. MARRIAGES.	TOTAL. BIRTHS.	TOTAL. DEATHS.	BIRTHS. Including Illegitimate Births. Males.	BIRTHS. Including Illegitimate Births. Females.	BIRTHS. Illegitimate Births. Males.	BIRTHS. Illegitimate Births. Females.	DEATHS. Males.	DEATHS. Females.	Excess of Births over Deaths.

* As from 1st November, 1916, the boundaries of the superintendent registrar's district of Fermoy have been extended so as to include the registrars' districts contained in the superintendent registrar's district of Mitchelstown which has ceased to exist. The figures given in this report relate to the areas as existing before the amalgamation.

NOTE.—This Table has been constructed for the years 1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year as given in the Irish Census Reports of 1851; an allowance proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872 to 1914—By adding the births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81, 1882-91, 1892-1901, and 1902-1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911, respectively, and the population as shown by the Census in each of the years.

1915-1916—The estimated population for 1915 has been computed as in 1914 with some additional adjustments with regard to the movements of the military. The population in 1915 has been adopted provisionally for 1916.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, 1901, and 1911.

Periods.	Sexes.	AGES—YEARS. Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85	85 and under 95.	95 and upwards	TOTAL.

Clones .. 162, 172
Clonmel .. 112, 116
Coleraine .. 166
Cookstown .. 177
Cootehill .. 139, 173
Cork .. 75
Corrofin .. 64
Croom .. 95

D.

Delvin .. 50
Dingle .. 90
Donegal .. 144
Downpatrick .. 155
Drogheda .. 33, 36
Dromore West .. 213
Dublin, North .. 6, 9
Dublin, South 7, 10
Dundalk .. 34
Dunfanaghy .. 145
Dungannon .. 178
Dungarvan .. 117
Dunmanway .. 76
Dunshaughlin .. 37

E

Edenderry .. 14, 25, 38
Ennis .. 65
Enniscorthy .. 54
Enniskillen .. 140, 163
Ennistimon .. 66

F.

Fermoy .. 77

G.

Galway .. 184
Glennamaddy .. 185
Glenties .. 146
Gorey .. 55
Gort .. 186
Granard .. 30, 51, 141

I

Inishowen .. 147
Irvinestown .. 164, 179

K.

Kanturk .. 78
Kells .. 39
Kenmare .. 91
Kilkeel .. 156
Kilkenny .. 19
Killadysert .. 67
Killala .. 202
Killarney .. 92
Kilmacthomas 118
Kilmallock .. 79, 96
Kilrush .. 68
Kinsale .. 80

L.

Larne .. 127
Letterkenny .. 148
Limavady .. 167
Limerick .. 69, 97
Lisburn .. 128, 157
Lismore .. 119
Lisnaskea .. 165
Listowel .. 93, 98
Londonderry .. 149, 168
Longford .. 31
Loughrea .. 187
Lurgan .. 129, 133, 158

M.

Macroom .. 81
Magherafelt .. 169
Mallow .. 82
Manorhamilton 195
Middleton .. 83
Millford .. 150
Millstreet .. 84
Mitchelstown .. 85, 99
Mohill .. 196
Monaghan .. 174
Mount Bellew 188
Mountmellick 26, 46
Mullingar .. 52

N.

Naas .. 15, 59
Navan .. 40
Nenagh .. 105
Newcastle .. 100
New Ross .. 3, 20, 56
Newry .. 134, 159
Newtownards .. 160

O.

Oldcastle .. 41, 142
Omagh .. 180
Oughterard .. 189

P.

Portumna .. 190

R.

Rathdown .. 8, 60
Rathdrum .. 61
Ratikeale .. 101
Roscommon .. 210
Roscrea .. 27, 47, 106

S.

Scarriff .. 70
Shillelagh .. 62
Skibbereen .. 86
Skull .. 87
Sligo .. 214
Strabane 151, 181
Stranorlar .. 152
Strokestown .. 211
Swineford .. 203

T.

Thomastown .. 21
Tharles .. 107
Tipperary .. 102, 113
Tobercurry .. 215
