THE REPORT
OF THE
PRESIDENT OF QUEEN'S COLLEGE, BELFAST,
FOR
SESSION 1887-88.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,—

I have the honour of submitting to your Majesty my Report on the condition and progress of Queen's College, Belfast, during Session 1887-88.

The progress of the College has been most satisfactory. Never before during one academic year have our Students gained so many and such high University Honours. In the Royal University, to which the great majority go for their Degree Examinations, they have won, as in former years, some of the first places; and in the old Universities of the country—Oxford, Cambridge, and Dublin—a number of senior men, who received the chief part of their training here, have been equally successful. I now place before your Majesty a brief summary of the principal Honours gained during the year.

HONOURS GAINED BY STUDENTS DURING THE YEAR.

University of Cambridge.—William M'Fadden Orr, a former Scholar of the College, *First Place* in the Mathematical Tripos. This is the third time within the short period of ten years that a former Student of this College has gained the highest Mathematical Honours in the University:—Mr. Allen was Senior Wrangler in 1879; Mr. Larmor in 1880; and now Mr. Orr in 1888. Mr. Larmor is at present University Lecturer in Cambridge, and he was appointed one of the two Examiners in the recent Mathematical Tripos.

Mr. Orr's whole University career has been exceptionally brilliant. He was First Science Scholar in this College during his three years' course. He was first Mathematical Scholar in the Royal University. He gained the Royal University Studentship in Mathematical Science, value £100 a year for five years—the highest honour in the gift of the University in that subject. He also took his Degree of M.A. with first honours, and a Gold Medal was awarded to him for distinguished answering. He gained First Foundation Scholarship, and was first at all Term Examinations in St. John's College, Cambridge.

W. Harold Major, Scholarship in Queen's College, Cambridge; W. W. Haslett, Exhibition, St. John's College; E. M'Bride, Exhibition, St. John's; H. D. Darbishire, Foundation Scholarship, St. John's; W. A. Russell, Senior Optime, Mathematical Tripos.

Oxford University.—J. E. Campbell, Senior University Scholarship in Mathematics, Fellowship and Tutorship in Hertford College; W. F. C. Anderson, Second Class in Final Classical School; R. W. Barnett, Second Class in Jurisprudence; W. Haldane Porter, Scholarship, Lincoln College, 1887, Goldsmith Exhibition, 1888.

University of Dublin.—James Gregg, First Science Scholarship; J. C. Newsome, Classical Studentship; H. B. Steede, Mathematical Studentship; E. Harris Luke, Classical Scholarship.

King's Inns, Dublin.—Robert M'Ilroy gained the John Brooke Scholarship.

Royal University of Ireland.—During the academic year 133 Students of this College obtained Degrees:—53 in Arts, 74 in Medicine, 4 in Law, and 2 in Engineering. The total number who passed University Examinations in the several grades was 284, and the following honours, prizes, and exhibitions were gained by them:—One University Studentship in Mathematics (the only one awarded); one Gold Medal, with Degree of M.A. (the only one awarded); one Special Prize of £50, with the Degree of M.A. At the Degree Examinations for B.A., 18 honours and 9 exhibitions. At Second Examination in Arts, 30 honours and 5 exhibitions. At First Examination in Arts, 25 honours and 6 exhibitions. At Medical Examinations, 6 honours and 1 exhibition. At Engineering Examinations, 1 honour and 1 exhibition. The total number of exhibitions and other high prizes awarded by the University during the year was 73, and of these the Students of this College gained 24.

I find from the official records that the Royal University has, since its foundation in 1882, awarded *nine Studentships*; and of these, this College has gained *five*—two in Mathematics, one in Experimental Science, one in Mental and Moral Science, and one in History and Political Philosophy.

Referring to the recent Competition for a Mathematical Studentship between two of the former Students of this College, the Vice-Chancellor, Lord Emly, said:—"At our late Examinations we had a combat of giants. Mr. Orr, one of the most distinguished Mathematicians of Cambridge, competed successfully for our Studentship with Mr. Campbell, who has just won the highest Mathematical Honours at Oxford. With each—

Nec tam turpe fuit vinci quam contendisse decorum est."

The University has also awarded *four Gold Medals* for "highly distinguished answering" at the M.A. Examinations; and of these, this College gained *three*—two in Logic, Metaphysics, and Political Economy; and one in Mathematical Science.

The foregoing long list of high honours and rewards shows that our Professors have done their work faithfully and successfully, and that the Students have nobly maintained the high prestige of the College.

DIFFICULTIES AND WANTS OF THE COLLEGE.

While recording successes, I feel it to be my duty to call special attention to the difficulties with which we have to contend. Several of the Professors have been seriously retarded and crippled in their work by insufficient laboratories and defective apparatus

The number of our students, combined with the requirements of modern education, has far outgrown the capacity of the buildings. The Physical, Histological, and Biological Laboratories are miserably insufficient. The Chemical Laboratory is so small that it has not accommodation for one-third of those in attendance, and others are thereby prevented from entering. The Professors are subjected to great inconvenience, and to much extra labour. In fact, they are unable to carry on their most important educational work with that efficiency and complete success after which they most energetically strive. Practical training in several departments of science is now absolutely necessary, not only to obtain high-class University degrees, but to fit young men for the business of life. Queen's College ought in this respect to be fully equipped. It is situated in a town growing with amazing rapidity, filled and surrounded by great manufactories, which form the chief sources of the wealth and prosperity of Ulster. A comparatively small grant toward the enlargement and equipment of our laboratories would enable us to carry out still more successfully than heretofore the great purpose for which the College was founded and endowed; and it seems to me to be a short-sighted policy to enfeeble and starve an institution which has shown itself to be in all respects worthy of public support.

NUMBER OF STUDENTS IN ATTENDANCE.

The number of Students who entered the College for the first time during the Session was 109. Of these, 92 had matriculated in the Royal University, 1 in Trinity College, Dublin; 1 in Cambridge, and 1 in this College. Fourteen were enrolled as non-matriculated.

The total number on the books in each department during the Session was as follows:—Arts, 180; Medicine, 227; Law, 21; Engineering, 9. Of these, 9 attended in more than one department, so that the total number of individuals was 428, being a slight increase upon the previous year.

Nine ladies were enrolled, all of whom had matriculated in the Royal University. Many more would, I have reason to believe, have entered had the Council been able to admit them to compete, like other Students, for Scholarships and prizes. This we are by Statute prevented from doing. I have, therefore, to express the earnest wish that your Majesty will be graciously pleased so to alter our Statutes as to give women the same rights and privileges in this College as they possess in the Royal University. On my own responsibility I gave them permission several years ago to attend the Arts classes, and the result has been satisfactory. Some of the Lady Students have taken very high places at the College and the University Examinations. We could not legally give them the rewards to which by their answering they were entitled; but the Royal University had that power.

Though, as I have shown, the College continues to prosper, I cannot ignore the fact that a few years ago it suffered a very serious reverse. When the Queen's University was dissolved in 1882 our Students numbered 567; now they number only 428. The cause of the diminution is evident. They were much attached

to the University with which the College had been connected for the third of a century. Their former status and privileges were taken from them, and an entirely new educational system was forced upon the youth of the country—the Queen's University, with its three affiliated Colleges, was replaced by the Royal University, which is simply an Examining Board without any teaching functions, and without any affiliated Colleges. Hence the great falling off in the number of our Students. What would be the effect on the Colleges of Oxford and Cambridge were the Universities to which they are attached suddenly dissolved—were it ruled that collegiate residence is no longer required in candidates for degrees—were the Students reduced to the same footing as pupils educated in a school or under a private teacher—were they driven away to some newly-constituted Examining Board for their degrees—were their cherished University privileges and prestige suddenly taken from them—and, further, were the whole future of University education in England left in doubt and danger? Would the Colleges maintain their position for many years under such circumstances? It will be said such a state of matters is impossible. It may be so, and I trust it is so, in regard to the Colleges of Oxford and Cambridge. But this is just the position in which Queen's College was placed by the dissolution of the Queen's University. It is not strange, therefore, that the number of our students has so greatly diminished.

THE COLLEGE AND THE ROYAL UNIVERSITY.

The Royal University, which in some respects took the place of the Queen's University, is essentially different in its constitution—it is, in fact, an Examining Board. It has no teaching functions; it has no colleges. It does not require candidates for degrees in Arts to reside in any college. They may study at home; they may learn at school; or they may be “crammed” by professional grinders. Those, I maintain, are grievous defects, prejudicial to sound academic training. There is, however, I freely admit, much to be said in favour of the Royal University, when the exceptional condition of Ireland is taken into consideration. It supplies, to some small extent, a long-felt want, and it remedies to some small extent a long-felt grievance. Large numbers have taken advantage of the facilities it affords for passing examinations and obtaining degrees. But the conducting of examinations and conferring of degrees form a very small and a very inferior part of the functions of a University. Its main functions are, or ought to be, the culture, moulding, and enlarging of the mind; the training of its *alumni* intellectually, morally, and socially for discharging in the most efficient manner the various duties of life. In these respects the Royal University is, from the nature of its constitution, to a large extent inoperative. True, it brings together for open examination and competition in Literature, Science, Medicine, Law and Engineering, youths from all parts of the country, and from all sects and classes of the people. It makes no distinction between class and class, or between candidate and candidate. Ability to pass the examination is the sole test applied, and no ground is left for even a sentimental objection.

This is, so far, well. It does good to let the different classes see each other, and test on a fair field their respective talents and attainments. But, unfortunately, they only meet in the examination rooms. They are not trained together. They are, as a body, debarred from that intercourse which tends to break down prejudice—from that guidance by master-minds which directs in the right path of, and to, real knowledge—from that bright example of men who, by life-long study and experience, have been prepared to furnish sound principles of thought and action. The Royal University fails in these respects, and, as at present constituted, it can never equal, in educational efficiency or ultimate success, the great teaching Universities of this country or of any country in Europe.

It is, however, capable of improvement. It might have, and I think ought to have, affiliated colleges like Oxford and Cambridge, sufficiently endowed, and fully equipped for all departments of sound education, and suited also to the wants and conscientious convictions of all parties. The Students of those colleges could then compete on equal terms for University honours and rewards. Until this is done—done judiciously and generously by a patriotic Government—the vexed question of University Education in Ireland will never, I fear, be satisfactorily settled.

Meantime there are minor reforms which might be effected in the University, and as they affect the Students of this College, I think it right to mention them. Our Students complain of the frequent changes made in the courses for examination, and more especially in the department of Medicine. New arrangements are introduced—sometimes without sufficient notice—as to the mode and time of attendance on hospitals, as to the precise order in which College lectures are to be delivered, and as to the exact period during which alone certain subjects are to be studied. These new regulations interfere with the order which has been successfully followed in this College for forty years, and they are harassing to both Professors and Students. The same freedom in the order of study should be allowed to Students of the Royal University which is given in the Scotch Universities.

Another law is strongly objected to. It is now required that every candidate for a Medical degree pass first the Matriculation Examination; then, after the lapse of a year, the First University Examination in Arts; and then only can he enter on his medical studies. The subjects for Matriculation and for the First University Examination are the same; the latter, of course, being somewhat more advanced. It frequently happens that a youth comes up for Matriculation so well prepared that he could at once pass the other examination. But he is not permitted to do so, and a whole year must elapse before he can enter on his proper professional work. To him this year is practically lost. He is not even required to attend a college. His superior talents and attainments are not recognized by the University. He must wait, in idleness or otherwise, until inferior men, by the aid of private grinding or reading, are able to pass the First University

Examination; then, but then only, is he permitted to go forward. This is surely an injustice to our best students. I know they feel it to be so; and I am not surprised that many of them go to the Scotch Universities where no such rule exists, and where, moreover, the University regulations are clear and fixed, so that youths know exactly what studies are before them.

The plea urged by those who favour the Royal University rule is, that it secures a higher preliminary education in Arts for medical-men. But is this the case? What is the value of a year spent in private study or with a grinder? A much more satisfactory order would be that of the Universities of London and Edinburgh. Let the course for Matriculation in the Royal University be enlarged to the extent, for example, of the present course for Honours, or for the First University Pass; let the examination be thoroughly testing; and then permit those who pass to proceed at once with professional studies. This would enable the candidate to take his Medical degree in four years after Matriculation, as he can do in London, Edinburgh, and Glasgow. It would have this additional advantage—it would secure a far higher standard of school education, and prevent half-educated youths from rushing forward to the University.

CONDUCT AND DISCIPLINE—REPORTS OF DEANS OF RESIDENCES.

The general conduct of the students during the Session was highly satisfactory, and their attention to study is shown by their successes already mentioned. The College Scholarships were deservedly won. Prizes were given by the Council to the most distinguished in each class and department. The members of Council regretted that their limited funds did not allow a more liberal distribution to deserving students. I think I may safely state that no University College in the United Kingdom has done so large an amount of thorough educational work on such limited means, and under so much discouragement from defective Laboratories.

The Reports of the Deans of Residences are as follows :—

The Rev. J. E. Busby, LL.D. :—

“I have the honour to report, in reference to the Church of Ireland students, that during the past Session they have comported themselves in a fitting and gentlemanlike manner. The places in which they resided have been properly conducted, and the moral tone of the students has been good. I regret I have not been able to induce any of them to attend classes for religious instruction. The causes, I have been informed, are certain changes which have been made in the requirements of the Royal University in attendance on classes in practical subjects.

“J. EDWARD BUSBY, Clk., LL.D.,

“Dean for the Church of Ireland.”

The Rev. Thomas Hamilton, D.D. :—

“During the Session I held a class in the College for the religious instruction of the Presbyterian Students. At the close of the Third Term their attention to the lectures I delivered was tested by an examination; and I was enabled, by the kindness of some friends, to

offer several prizes, which were gained by the following students :—
1. Thomas A. Smyth ; 2. Adam Fulton ; 3. J. S. Wood. The following also distinguished themselves :—R. M. Legate, John Rusk, Robert Smyth, and F. M'Clelland. During the winter I arranged a series of sermons for students of the Presbyterian Church, which were largely attended.

"I have only to add that the conduct of the students, so far as it came under my observation, was unexceptionable.

"THOMAS HAMILTON, D.D.,

"Dean for the Presbyterian Church.

"30th May, 1888."

The Rev. Alexander Gordon, M.A. :—

"I have to report that the students under my care, during the past Session, have, to the best of my knowledge and belief, attended to their religious duties in a manner which is satisfactory.

"ALEX. GORDON, M.A.,

"Dean for the Association of Irish Non-Subscribing Presbyterians."

The Rev. J. W. M'Kay, D.D., LL.D. :—

"The names of twenty-seven students were returned to me by the Registrar as having entered the College. These, with their addresses, I distributed amongst the Ministers to whose congregations they would likely be attached, and subsequently ascertained that they were under their pastoral care. I have not been able myself to meet them for religious instruction, but the reports I have had from time to time as to their general conduct have been very satisfactory.

"JOSEPH W. M'KAY,

"Dean for the Methodist Church."

The foregoing reports show that the moral and religious instruction of the students of this College is attended to by those officially designated by their respective Churches, and commissioned by Your Majesty for that purpose.

In the Appendix I have given the usual tables, containing the names of the Visitors, President, Professors, Officers, and Deans ; also full particulars regarding the students in attendance ; the Lectures delivered by each Professor, and the number of students in his class ; the College Scholars and Prizemen ; the Degrees and Honours obtained by students in the Royal University ; list of students who have obtained Honours in other Universities ; the Benefactors of the College since its foundation ; and the Bursar's account of the receipts and expenditure during the financial year ending 31st March.

I have the honour to be,
