#### SEA FISHERIES OF THE UNITED KINGDOM, 1901.

RETURN to an Order of the Honourable The House of Commons, dated 22nd APRIL, 1902—for,

COPY "of STATISTICAL TABLES and MEMORANDUM relating to the SEA FISHERIES of the United Kingdom in the Year 1901; including also a Return showing the Quantity of Fish carried by Railway from each of the Principal Ports of England and Wales, Scotland and Ireland, in each Year from 1896 to 1901, inclusive (in continuation of Parliamentary Paper, No. 32, of Session 1901)."

Board of Trade, APRIL, 1902. FRANCIS J. S. HOPWOOD

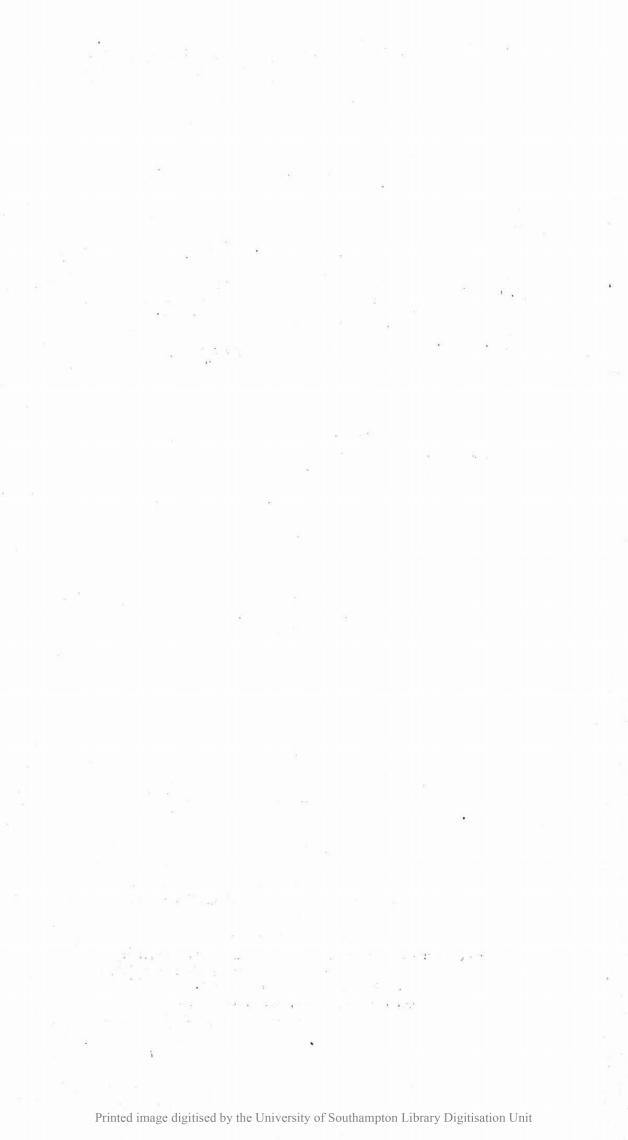

(Mr Gerald Balfour)

Ordered, by The House of Commons, to be Printed. 28th APRIL, 1902.

LONDON:
PRINTED FOR HIS MAJESTY'S STATIONERY OFFICE,
BY WYMAN AND SONS, LIMITED, FETTER LANE, E.C.

And to be purchased, either directly or through any Bookseller, from
EYRE AND SPOTTISWOODE, EAST HARDING STREET, FLEET STREET, E.C., and
32, ABINGDON STREET, WESTMINSTER, S.W. or
OLIVER AND BOYD, EDINBURGH; or
E. PONSONBY, 116, GRAFTON STREET, DUBLIN.

PART III.—COMPARATIVE STATEMENT OF FISHING BOATS REGISTERED AND EMPLOYED, AN THE NUMBER OF MEN AND BOYS EMPLOYED IN FISHING.	
XIV.—Statement showing the Number and Net Tonnage of Fishing Boats of each Class registered under Part IV. of the Merchant Shipping Act, 1894, on the Register on 31st December of each of the years 1898 to 1900	Page
XV.—Statement showing the Number of Fishing Boats of all Classes registered under Part IV. of the Merchant Shipping Act, 1894, on the register on the 31st December of each of the years 1898 to 1900, and the number of such Boats, the Certificates of which were endorsed, known to have been employed in fishing in each Division of the United Kingdom and in Isle of Man and Channel Islands	36
XVI.—Statement showing the Estimated Number of Men and Boys regularly employed and occasionally employed in fishing in each division of the United Kingdom in each of the years 1898 to 1900	36
Part IV.—Comparative Statements of the Imports, Re-exports, and Exports of Fish, Fresh and Cured, for a Series of Years.	
XVII.—Statement of Imports and Re-Exports of Fish, Fresh and Cured, into and from the United Kingdom, showing the Net Imports in each of the years 1892 to 1901	37
XVIII.—Statement showing the Exports of Fish, Fresh and Cured (British and Irish Produce), from the United Kingdom, in each of the years 1892 to 1901	37
XIX.—Statement of Imports, Re-Exports, and Exports of Fish, Fresh and Cured, into and from the <i>United Kingdom</i> in the years 1900 and 1901, distinguishing the principal Countries from which Imported and to which Exported	38
PART V.—RETURN OF FISH CARRIED BY RAILWAY.	
XX.—Return of the Quantity of Fish carried by Railway from each of the principal Ports of England and Wales, Scotland, and Ireland, in the years from 1896 to 1901. (From Returns made to the Board of Trade by the various Companies)	39-46
Part VI.—Sea Fisheries.—Foreign Countries and British Colonies.	
XXI.—Statement of the Number of Vessels and Crews engaged in Fishing in Norway, with the Quantities and Value of the Produce in each year from 1884 to 1900	47
XXII.—Statement showing the Total Value of the Produce of the Fisheries of Denmark in each year from 1893 to 1899	47
XXIII.—Statement of the Total Number of Vessels and Crews engaged in Fishing in Holland, together with the Quantities and Value of Oysters Landed in each year from 1888 to 1900	48
XXIV.—Statement showing the Value of the Produce of the Sca Fisheries of Portugal, in each year from 1896 to 1899	48
XXV.—Statement of the Number of Vessels and Crews engaged in Fishing in France, with the Value of the Produce in each year from 1882 to 1899	49
XXVIDetailed Statement showing the Quantities and Value of the Produce of the Fisheries of France in each year from 1885 to 1899	49
XXVII.—Statement showing the Yield and Value of the Fisheries in the Dominion of Canada during the year 1899	50-51
XXVIII.—Summary Statement showing the Yield in the several Provinces of the Dominion of Canada during the year 1899	51
XXIX.—Statement showing the Number, Tonnage, and Value of Vessels and Boats, Value of Fishing Materials, &c., and Number of Fishermen engaged in the several Provinces of the Dominion of Canada during the year 1899	51

STATISTICAL TABLES and Memorandum relating to the Sea Fisheries of the United Kingdom in the Year 1901; including also a Return showing the Quantity of Fish carried by Railway from each of the Principal Ports of *England* and *Wales*, *Scotland* and *Ireland*, in each Year from 1896 to 1901, inclusive.

#### MEMORANDUM.

The results of the collection of fishery statistics during the year 1901 are given in the annexed Tables. This is the sixteenth complete year during which the statistics have been collected for England and Wales, the collection itself having been commenced in the spring of 1885.

The main figures now given relate to the fishery statistics of England and Wales, but tables are added as in former years giving statistics of the Scottish and Irish fisheries based on monthly returns received from the Fishery Board for Scotland and the Fisheries Branch of the Department of Agriculture and Technical Instruction for Ireland. Further tables relate to the number of fishing boats registered and employed, and the quantity of fish carried by railway, and some information is also given respecting certain Foreign Countries and Colonies. As regards the statistics for England and Wales the particulars are obtained, generally speaking, through the officers of Coast-Guard employed at the different stations, the exceptions being in the case of the more important ports, where special officers are appointed. The returns as to the quantity and value of fish landed on the coasts of England and Wales are made by the various officers, and an abstract of the results is published each month by the Board of Trade, the figures now given being compiled from the monthly returns, revised and corrected. Throughout the Tables the values given are those of the fish at the time of landing. The statistics it must be remembered relate to fish of British taking first landed on the coasts of England and Wales, that is to such fish as is landed direct from the fishing grounds, excluding fish imported from abroad or landed by foreign fishing vessels, as well as all fish that has been previously landed elsewhere in the United Kingdom.

The following statement shows the quantity and value of the fish landed on the coasts of England and Wales during the years 1899, 1900 and 1901:—

ENGLAND AND WALES.

FISH LANDED IN ENGLAND AND WALES.

Years.	Fish Landed Shell	(exclusive of Fish).	Shell Fish Landed.	. Total Value.	
Icars.	Quantity.	Value.	Value.	3:	
	Cwts.	£, 6,342,000	£. 360,000*	£. 6,702,000*	
1899	8,605,000 8,600,000	6,610,000	335,000*	6,945,000*	
1901	8,648,000	6,523,000	325,000	6,848,000	

Returns

Returns for Scotland and for Ireland given in the same form show the following results:-

Statement showing the quantity and value of the fish landed on the coasts of Scotland in 1899, 1900 and 1901 :-

1900	702,000	306,000	62,000†	368,000†	
1901*	706,000	285,000	14,000	299,000	

<sup>\*</sup> Provisional figures.  $\dagger$  Including some particulars of values for shell fish, obtained from other sources than the returns made by the Collectors. See note  $\ddagger$  p. 30.

The aggregate result for the whole of the United Kingdom during the triennial period is as follows:-

FISH LANDED IN THE UNITED KINGDOM.

UNITED KINGDOM.

Years.	Fish Landed Shell	(exclusive of Fish).	Shell Fish Landed.	Total Value.	
	Quantity.	Value.	Value.	3	
	Cwts.	£.	£.	£.	
1899	14,960,000	8,936,000	497,000†	9,433,000†	
1900	14,671,000	9,242,000	473,000†	9,715,000†	
1901*	15,739,000	9,046,000	420,000	9,466,000	

<sup>\*</sup> Provisional figures. + Amended figures. The figures include some particulars of ralues for shell fish for Ireland, obtained from other sources than the returns made by the Collectors. See notes \* and  $\ddagger$  p. 30.

It

It will be observed that in all three divisions of the United Kingdom the general trend of the figures as regards fish other than shell fish was the sameviz., an increase in the quantity and a slight decrease in the value of the fish landed. In England and Wales and in Scotland (though not in Ireland) the quantities landed were the greatest hitherto recorded, and the value of the fish only surpassed by the figures of 1900.

In the United Kingdom as a whole the quantity landed was not quite so great as in 1898.

The following Statement shows (see Appendix, Table VIII.) the quantity and value of fish (exclusive of shell fish) returned as landed on the coasts of the United Kingdom in each year in the decennial period 1892 to 1901.

Years.	Quantity (exclusive of Shell Fish).	Value (exclusive of Shell Fish).	Years.	Quantity (exclusive of Shell Fish).	Value (exclusive of Shell Fish).
	Cwts.	£.		Cwts.	£,
1892	12,528,000	6,495,000	1897	13,898,000	7,514,000
1893	13,568,000	6,743,000	1898	15,837,000	7,985,000
1894	14,049,000	6,816,000	1899	14,960,000	8,936,000
1895	14,069,000	7,168,000	1900	14,671,000	9,242,000
1896	14,711,000	7,058,000	1901*	15,739,000	9,047,000

DECENNIAL STATEMENT OF FISH LANDED IN THE UNITED KINGDOM.

\* Provisional figures.

In spite of fluctuations the general tendency of these figures is unmistake- Fluctuations Both the amounts landed and the value are increasing on the whole, IN AMOUNTS OF but the value, although nearly stationary in the last three years, has increased FISH LANDED. during the period more markedly than the quantity. Thus in the first three years of the ten above included—i.e., 1892 to 1894 inclusive, the average annual value, exclusive of shell fish, was 6,685,000l., the average quantity being 13,382,000 cwts., whilst during the last three years, 1899 to 1901 inclusive, the average annual value amounted to 9,075,000l., the average quantity being 15,123,000 cwts. These figures therefore show an increase of 13 per cent. as regards quantity, and 36 per cent. as regards value, as between the two above-named periods.

As already stated, the total quantity of fish landed in England and Wales FISH LANDED IN (exclusive of shell fish) in 1901 was 8,648,000 cwts. Of this amount (see Table I. in the Appendix) herrings (2,453,000 cwts.) and haddock (2,353,000 cwts.) together account for 56 per cent. These fish, however, represent less than 40 per cent of the value of the fisheries, the value of the haddock being 1,700,000l., and of the herrings 893,000l., out of a total value (excluding shell fish) of 6,523,000*l*. The most valuable fish in proportion to their weight are, of course, soles and turbots. Of the former the 76,000 cwts. landed were valued at 561,000%, and of the latter 53,000 cwts. were landed, valued at 229,000l.

ENGLAND AND

The variations in the last three years of the quantity and value of particular descriptions of fish landed in England and Wales are shown in Table X. of the Appendix. It will be seen that the haddock decreased in quantity from 2,487,000 cwts. in 1900 to 2,353,000 cwts., but increased in value from 1.696,000i. to 1,700,000l.; whilst herrings, on the other hand, increased in quantity from 2,425,000 cwts. to 2.453,000 cwts., but decreased in value

from 934,000l. to 893,000l. In spite of this, the average value of the herrings. caught on the English and Welsh coasts continues high. The growth in both the volume and the value of the herring fishery in the Southern half of the United Kingdom has during the last few years been very remarkable. the thirteen years from 1886 to 1898 inclusive the quantity landed neverreached two million cwts., and the average value, except in 1890 and 1891, when there was a great scarcity, ranged from 4s. 9d. to 6s. per cwt. In 1898, however, coincidentally with a rise in the quantity to 21 million cwts., the average value rose to nearly 7s. 2d. per cwt., a rise which has been fully maintained in the two subsequent years, the average value having been 7s. 8d. in 1900, and 7s. 3d. in 1901, and the quantity landed in the latter year nearly reaching 21 million cwts.

The quantity of plaice landed showed a considerable increase from 753,000 cwts. in 1900 to 848,000 cwts. in 1901; whilst the value increased from 909,000l. to 934,000l. Soles, the next most important fish as regards total value, increased slightly in quantity and decreased slightly in value. Cod, mackerel, and hake increased in both quantity and value, while turbot and halibut decreased.

The average value of prime fish generally increased from 5l. 5s. per cwt. in 1900 to 5l. 8s. 8d. per cwt. in 1901, the supply having been somewhat The average value of all kinds of wet fish landed decreased slightly from 15s. 4d. per cwt. in 1900 to 15s. 1d. per cwt. in 1901. Most classes of fish advanced in price, but this advance was outweighed by a decrease in the average value of a few of the more important kinds, notably herrings, plaice. soles, and mackerel.

The following were the average values per cwt. in 1901 of the more important classes of fish at the time of landing on English and Welsh coasts:-Soles, 7l. 6s. 10d.; turbot, 4l. 6s. 9d.; cod, 15s. 3d.; haddock, 14s. 5d., halibut, 1l. 17s. 7d.; herrings, 7s. 3d.; mackerel, 14s. 4d.; plaice, 1l. 2s. 0d. These compare with the following averages in 1900:—Soles, 7l. 10s. 8d.; turbot, 4l. 3s. 3d.; cod, 14s. 8d.; haddock, 13s. 8d.; halibut, 1l. 13s. 8d.; herrings, 7s. 8d.; mackerel, 15s. 9d.; plaice, 1l. 4s. 2d.

FISH LANDED ON

In Scotland (see Table XI.) the quantity of fish landed (other than shell Scottish Coasts. fish) was greater by over a million cwts. than in 1900, but did not equal the quantity landed in 1898, which is the largest so far recorded. Greater quantities of nearly every kind of fish were landed than in 1900, and the values were also in most cases greater. Owing, however, to a considerable fall in the value of herrings, the total value of the fish landed was lower than in the previous year. Herrings, in fact, so largely preponderate in the Scottish fisheries that they, in a great measure, control the whole of the returns.

> The following statement shows the total quantity and value of the fish. (exclusive of shell-fish) landed on the Scottish coasts in each of the years 1899, 1900 and 1901, distinguishing the quantity and value of the herrings landed during the same period:—

Years.	Total Quantity and (exclusive o	Value of Fish landed f shell-fish).	Quantity and Value of Herrings landed.		
1899	Cwts. 5,145,000	£. 2,190,000	Cwts. 3,207,000	£. 1,143,000	
1900	5,369,000	2,326,000	3,520,000	1,243,000	
1901*	6,385,000	2,238,000	4,339,000	1,061,000	

<sup>\*</sup> Provisional figures.

In Scotland, as in England and Wales, the average values of the herrings landed were abnormally high in 1899 and 1900, viz., 7s. 1d. per cwt. in

The average value in 1901, viz., 4s. 11d. per cwt., more in each year.

nearly resembles the values prevailing before 1899.

The only other descriptions of fish besides herrings which hold an important position in the Scottish sea fisheries returns are haddock and cod. Of the former, 831,000 cwts., valued at 527,000%, were landed in 1901, as against 761,000 cwts. in 1900, valued at 503,000%. Of the latter, the quantities landed were 446,000 cwts. in 1901, and 434,000 cwts. in 1900; these quantities being valued at 213,000l. and 206,000l. respectively. haddock fell in average value from 13s. 2d. per cwt. in 1900 to 12s. 8d. in 1901, whilst cod rose from 9s. 6d. to 9s. 7d. per cwt.

In Ireland (see Table XII.) the quantity of fish landed was only slightly Fish LANDED ON greater than in 1900, whilst the value was less. The general results compare, in fact, unfavourably with those of most of the years since 1888, when the statistics were first obtained.

IRISH COASTS.

The following statement shows the total quantity and value of the fish (exclusive of shell-fish) returned as landed on the Irish coasts in each of the years 1899, 1900, and 1901, the quantity and value of mackerel landed being stated separately. Mackerel is still from the point of view of total value the principal fish in the Irish fisheries, although the quantities landed are less than they were some years back, whilst the importance of the herring fisheries is on the whole increasing:-

Years.	Total Quantity and V	alue of Fish landed	Quantity and Value of Macl	
	(exclusive of	Shell-fish).	landed.	
1899	Cwts.	£.	Cwts.	£.
	1,210,000	404,000	625,000	202,000
1900 -	702,000	306,000	278,000	120,000
1901*	706,000	285,000	310,000	106,000

\* Provisional figures.

It will be seen that the quantity of mackerel landed was 310,000 cwts., as against 278,000 cwts. in 1900; but this was less than half the quantity landed in 1899, whilst the total value of the catch was lower than that of 1900, the lowest hitherto recorded. The catch of herrings, on the other hand, though less both in quantity and value than that of 1900 (being 266,000 cwts., valued at 75,000l., as against 284,000 cwts., valued at 84,000l.) compares more favourably with the figures for earlier years. The average values of these two kinds of fish, the only kinds of any great importance in the Irish fisheries were: -Mackerel, 6s. 10d. per cwt. in 1901, as compared with 8s. 8d. in 1900; herrings, 5s. 8d. in 1901, as compared with 5s. 11d. in 1900.

The average value of the prime fish landed was 3l. 5s. 10d. per cwt., as against 3l. 17s. 1d. per cwt. in 1900, and the average value of all fish landed was 8s. 1d. per cwt. as compared with 8s. 9d. in 1900.

The foregoing figures relate to the quantity and value of fish "other than SHELL FISH. shell-fish." The total value of shell-fish landed on the coasts of England and Wales in 1901 (see Table X.) was less than in 1900, being 325,0001., as against 335,000l. Oysters were valued at 121,000l, as compared with 132,000% in 1900, although the numbers landed were only slightly less, being 37,301,000 in 1901, and 37,847,000 in 1900. The value of both the crabs and lobsters landed was slightly greater than in 1900, although the number of lobsters was somewhat less. The quantity of other shell-fish landed (cockles, mussels, periwinkles, escallops, shrimps, etc.) fell off from 432,000 cwts. in 1900 to 401,000 cwts. in 1901, and the value from 117,000l. to 116,000l.

In Scotland the value of the shell-fish landed was 81,000l., as against 76,000% in 1900. In Ireland the value of the amounts returned by the collectors was only 14,000%, as against 16,000% in 1900.\*\*

<sup>\*</sup>These figures are exclusive of some particulars of values obtained from other sources than the returns made by the Collectors, for which see the Reports on the Sea and Inland Fisheries of Ireland.

5973. The 5973.

TOTAL VALUE OF SEA FISHERIES OF THE UNITED KINGDOM, The total value therefore of the Sea Fisheries of the United Kingdom in the year 1901, according to the foregoing figures, and exclusive of salmon, was as follows:—

							Value, excluding Shell-fish.	Value, including Shell-fish.
							£.	£
	England and	Wal	es	-	-	-	6,523,000	6,848,000
Fish landed in	Scotland †	-	•		+	-	2,238,000	2,319,000
	Ireland ‡	-	-	-	-	-	285,000	299,000
			TOTAL	-		£.	9,046,000	9,466,000

<sup>+</sup> According to the Monthly Statements of the Fishery Board for Scotland for the year 1901, which are subject to rectification in the Annual Report of that Board.

It must be understood, however, that all the foregoing figures represent the values at the time of landing only, nothing being included for the earnings of other fishing industries connected with curing and like operations, or with the carriage of the fish to market, by which the value of the fish is frequently much enhanced before it reaches even the wholesale markets. In comparing these figures with estimates of the value of the fishing industry of the United Kingdom in which other items are included, this difference in the basis should always be borne in mind, for if the value of the fish were to be taken at a later stage of the industry, the annual value, instead of being roughly speaking between nine and ten millions, would probably amount to double that total.

EAST COAST FISHERIES. A comparative table is given (see Table XIII. in Appendix), showing the quantities and value of the fish landed at each of the principal ports in England and Wales during the last ten years, which illustrates the various fluctuations in the fishing trade at each of those ports. On the East Coast, Grimsby maintains its place as the most important fishing port, the amount returned as landed there being 99,466 tons. The labour dispute in the steam trawling industry at this port is no doubt responsible for the fact that this quantity is less than that (107,478 tons) landed in 1900. It is, however, greater than that landed in 1898 or in any previous year. Next in importance come Hull with 67,679 tons, and Lowestoft with 57,561 tons, both these figures being greater than any hitherto recorded. At Yarmouth, on the other hand, the quantity landed (40,081 tons) was not so great as in either of the two preceding years.

In London no water-borne fish has been landed at Shadwell since the commencement of September, 1899, and from this time onwards the quantity first landed in London has been considerably less. The following statement shows the quantities first landed at Billingsgate and Shadwell in recent years with the values thereof:—

Quantities

<sup>‡</sup> According to the Monthly Statements of the Fisheries Branch of the Department of Agriculture for Ireland for the year 1901, which are subject to rectification. These figures are exclusive of some particulars of values obtained from other sources than the returns made by the Collectors, for which see the Reports on the Sea and Inland Fisheries of Ireland.

<sup>\*</sup> A few Salmon caught off the coast of England and Wales are included under the heading of fish not separately distinguished.

QUANTITIES and Total Value of Fish first landed at London in the following Years:—

Years.		Quantities.		Total Value.			
	Billingsgațe.	Shadwell.	Total.	Billingsgate.	Shadwell.	Total.

<sup>&</sup>quot; No water-borne fish has been landed at Shadwell since the commencement of September 1899.

The fish sold at Billingsgate includes, of course, a large quantity of fish other than that first landed there, and in this connection the following statement compiled from the monthly returns of the Fishmongers Company may be of interest:-

STATEMENT showing the quantity of fish\* delivered at and near Billingsgate market, by rail and by sea, in the undermentioned years.

<sup>\*</sup> Including Shell Fish.

The two most important ports on the South Coast are Plymouth and South Coast Newlyn, the former, with 9,665 tons, having in 1901 surpassed the latter Fisheries. with 8,872 tons. Both these figures are greater than those for the preceding year, the increase at Plymouth being especially marked. On

WEST COAST FISHERIES.

On the West Coast Milford has now been for some years the most important fishing port, its progress having been very rapid. The quantity landed in 1901 (16,572 tons) is not only the greatest recorded at this port, but is more than twice as great as the quantity landed six years ago. Fleetwood is next in importance with a total of 9,260 tons. Attention may be called to the growth of the fishing trade at Cardiff and Swansea, the latter not having until 1901 any but an insignificant position.

WALES.

The quantity and value of the fish landed in England and Wales in each LANDED MONTHLY month of the year are shown in Table III. Similar tables have now IN ENGLAND AND been prepared for a series of years, and from them it is evident that there is comparative regularity from month to month in the take of prime fish, as well as in the take of the kinds called "intermediate" between prime fish and those classed as inferior. On the other hand, frequent and great variations occur in the take of the more migratory kinds, such as herrings, mackerel, pilchards, and sprats, the changes as regards these largely affecting the total for particular months. There are necessarily also variations in the product of the oyster fisheries owing to the statutory close season. The There are necessarily also variations in the following statement gives the value of the fish landed in each month of the last three years:—

Values of Fish, including Shell Fish, landed on the Coasts of England and Wales in each Month of the undermentioned Years.

Calculation (Calculation)	Mont	h.			1899.*	1 9 0 0.*	1 9 0 1.
January -			-		£. 459,000	£. 503,000	£. 500,000
February	- 7	-	-	-	456,000	448,000	475,000
March -	325	2	2		555,000	542,000	529,000
April			31	-	538,000	593,000	609,000
May -				-	538,000	586,000	553,000
June -	-		-	-	528,000	529,000	526,000
July -	9	•	1/25	-	461,000	475,000	500,000
August -	*:		140	-	533,000	592,000	543,000
September	-		-	-	618,000	608,000	552,000
October -	-	-	7	-	754,000	725,000	752,000
November		•	-	-	732,000	775,000	760,000
December	:=	12	- 2	-	530,000	569,000	549,000

\* Amended figures for these years.

It will be seen that the months of October and November were the most productive to the fishing industry in all three years. This is attu-the herring fisheries of the East Coast being then at their height. This is attributable to the South and West Coasts the importance of the mackerel fisheries has in each of the last three years rendered May (when the greatest quantities of mackerel have been landed) the most productive month of the year. the three coasts together, the value of the catch was, in each year, lower in February than in any other month.

FISHING BOATS.

The Tables in Part III. of the Appendix give particulars of the number and tonnage of fishing boats registered under Part IV. of the Merchant Shipping Act 1894, the number of such boats known to have been employed in fishing during the year, and the number of men and boys regularly employed and occasionally employed in fishing. It appears from these tables that the total tonnage of registered fishing boats at the end of 1900 was 305,324 tons, or slightly less than at the end of either of the two preceding years. As regards the vessels known to have been employed, only the number can be stated—viz. 23,349 in 1900, out of 26,162 on the register. This number is also less than during either of the two preceding years. The number of men and boys regularly employed in fishing was 68,708 and the number occasionally employed 37,814 in 1900, as against 71,046 and 37,969 respectively Particulars are given in the Tables for each division of in 1899. the United Kingdom, according to the registration of the boats. should, however, be noted that many of the first and second class boats do not confine their operations to the divisions in which they are registered, and consequently a portion of their catch of fish may frequently be credited to one of the other divisions of the United Kingdom.

In Part IV. of the Appendix will be found Tables giving particulars with IMPORTS regard to the imports and exports of fish into and from the United Kingdom for the years 1892 to 1901 inclusive. The following statement summarises FISH INTO AND FROM THE the information which is there shown for the last two years:-

UNITED KINGDOM.

	1 9	0 0.	1 9 0 1.		
	Quantity.	Value.	Quantity.	Value.	
NET IMPORTS (after deducting re- exports):—	Cwts.	£.	Cwts.	£.	
Cured or Salted	980,461	2,199,382	908,010	2,016,960	
Fresh (Not of British taking) -	856,543	738,104	945,057	751,639	
TOTAL, Net Imports	1,837,004	2,937,486	1,853,067	2,768,599	
EXPORTS of British and Irish Fish:				,	
Herrings*	3,081,750	2,337,822	3,757,900	2,376,313	
Other Descriptions	†	663,030	t	694,556	
TOTAL, British and Irish Exports	†	3,000,852	†-	3,070,869	

The quantities are stated in barrels, but the barrel has here been taken as the equivalent of 2 cwts.

It will be seen that the net imports of foreign fish were nearly the same in quantity, though less in value, than in the previous year, the proportion of the cured and salted fish (which is more valuable than the fresh fish) being The quantity of herrings exported was the greatest recorded, and the value of the exports of fish, which has been tending upwards for the last few years, now amounts to over three millions sterling. Indeed, whilst the value of the net imports of foreign fish has during the last six years fluctuated between £2,637,000 and £2,937,000, the exports of British and Irish fish have risen year by year from a little over two to a little over three millions sterling.

A reference to Table XIX. will show that the largest proportion of the cured and salted fish imported is derived from Canada, Newfoundland, and the United States, though a considerable quantity of sardines imported from France and Portugal are also included in this category. The fresh fish is chiefly imported from Norway and Holland, but includes a quantity of oysters obtained mainly from the United States and France. The fish exported consists almost entirely of herrings, and the greater part of it is sent to Germany.

By taking the figures given above in conjunction with those already given for the produce of the sea fisheries of the United Kingdom, it is possible to give give an estimate of the value of the sea-fish consumed in the United Kingdom. This is done in the following Table, while the figures for 1891 are also stated for comparison:—

RÉSUMÉ STATEMENT.

	1891.	1901.
* ************************************	£.	£.
Fish, the produce of the United Kingdom Fisheries	7,001,000	9,466,000
,, Imported from Abroad, and retained for consumption -	2,274,000	2,769,000
Total £.	9,275,000	12,235,000
Deduct,—		,
Exports of Fish, the Produce of the United Kingdom Fisheries	1,711,000	3,071,000
TOTAL VALUE at landing of the Fish Consumed in the United Kingdom -}	7,564,000	9,164,000

From the above statement it would appear that the value of the fish consumed in the United Kingdom has risen from  $7\frac{1}{2}$  millions sterling in 1891, to nine millions in 1901. It must, however, be recollected that whilst the values of the produce of our own fisheries and of the fresh fish imported represent the values at the place of landing, the values of the cured and salted fish imported and exported are considerably in excess of the values of the same fish when first landed. It is true that the necessary deductions on this account apply to both the import and export trade, so that the resultant figures are not likely to be, far from correct. As between the years 1891 and 1901, however, the increase in imports is considerably less than that in exports, so that the growth in the value of the fish consumed during the ten years has probably been somewhat greater than that shown.

FISH CARRIED INLAND BY RAIL, Part V. of the present statement consists of a "Return of fish carried by each railway from the principal ports of the United Kingdom in each year from 1896 to 1901." This return has now been made for many years past, and serves in some measure as a check upon the returns at each individual port. The chief differences in the basis of the two returns are as follows:—The return of fish landed includes fish landed for local consumption, whereas such fish is, of course, excluded from the return in Part V. of fish carried away by rail. The return in Part V. of fish carried by rail includes the tare (boxes, packages and ice), and excludes the weight lost by the fish in cleaning and gutting when, as is sometimes the case, these processes are carried out after landing but before the fish is carried by rail. Further, the railway return includes the amount of shell-fish carried, such as oysters, crabs, lobsters, &c., by weight instead of their being returned separately by number, as in the landing account. The two returns therefore must be taken rather as affording a check on each other than for purposes of direct comparison.

FOREIGN AND COLONIAL SEA FISHERIES IN 1899.

Tables relating to the sea fisheries of certain foreign countries are appended to the Statistical Tables accompanying the present Memorandum. (See Part VI. of Appendix.) Statistics relating to Canadian fisheries, which are the most important among the Colonial fisheries, have also been added.

Comparing the fishery statistics of these countries with those of the United Kingdom for 1898 and 1899 (particulars for later years not being available in the case of most of the countries included) we have the following results:—

Annual

ANNUAL VALUE of the Sea Fisheries of the undermentioned Countries:

										1899.	1898.
Norway		_		-	-	-	-	-	-	£. 1,350,000	£. 1,147,000
Denmark	(est	imate	ed)	-	-	- ,		-	*	414,000	340,000
France	-	-	-	-	-	-	-	: =	-	5,055,000	4,823,000
Portugal	-	-	-	-	-	-	-	-		880,000	814,000
Canadian	Do	minio	n -	-	-		-	-	-	4,561,000	4,097,000
United I	King	dom	-	-	-	-	-	-	-	9,433,000	8,460,000

During the course of last year the Committee appointed to inquire into the COMMITTEE system of collecting Fishery Statistics made their report, and their recom- on Fishery mendations have now been considered. In accordance with these recommendations steps have already been taken to improve and considerably extend the Statistics collected at the most important centres on the East Coast of England. Additions have been made to the number of classes of fish for which returns are sent in, and in future Statistics, such fish as conger-eels, dabs, gurnards, lemon soles, skate and rays, and whiting will be separately distinguished.

Note.—In the "Report on the Sea and Inland Fisheries of Ireland for 1900" some particulars, other than those obtained from the Collectors, are added for Shell Fish for the years 1899 and 1900, but in order that the figures for these years may be made comparable with those for 1901, the additional information has not been included in this Table. See also note (‡)-to Table VIII. p. 30, in which the value of these particulars is given.

ENGLAND AND WALES,

XHI.—STATEMENT showing the QUANTITY of FISH (exclusive of Shell Fish) and the Total Value of Fish, including Shell Fish, returned as Landed at the Principal Ports or Districts in England and Wales, in each of the Years from 1892 to 1901, inclusive.

<sup>\*</sup> In the Custom House Returns the barrel of herrings weighs 2 cwts.

# PART V.—RETURN OF FISH CARRIED BY RAILWAY.

XX .-- RETURN of the Quantity of FISH CARRIED by RAILWAY from each of the principal Ports of England and Wales, Scotland, and Ireland, in the Years from 1896 to 1901. From Returns made to the Board of Trade by the various Companies.

(Note.—The figures in the back years have been in some cases altered, revised, or added to by the various Railway Companies. It will be understood that the quantity of fish included in this Return is not in some cases strictly the produce of the Sea Fisheries of the United Kingdom, but may include fish brought from abroad as well as river or river-caught fish, and that the gross weight of the fish carried (including boxes, packages, and ice) is in all cases given, as well as regards wet fish as shell-fish.)
