AGRICULTURAL STATISTICS, IRELAND, 1916.

REPORT

TO THE

SECRETARY OF THE DEPARTMENT OF AGRICULTURE
AND TECHNICAL INSTRUCTION FOR IRELAND.

SIR,

I have the honour to submit the detailed Annual Report on the Agricultural Statistics of Ireland for the year 1916. The present statistics, while elaborating and giving final precision to figures of which preliminary summaries have already been published in the General Abstracts showing the Acreage under Crops and the Numbers of Live Stock, and in the series of returns of the yields of the several crops, furnish in addition (1) particulars of the number and size of agricultural holdings and of their distribution; (2), a comparative record of the changes which took place in the several counties during the five years 1912 to 1916 as regards the extent and yield of the chief crops and the numbers of live stock; (3), statistics of the area under the chief kinds of bush and tree fruits; and (4), statistics of the area under woods and coppice, and of planting and felling operations.

The usual summary tables presented on pp. 2 *et seq.* show some of the salient points of the detailed tables, and also certain general and comparative statistics relating to agriculture.

CROPS, PASTURE, &c.

The total area of Ireland was returned in the Census of 1911 as 20,371,125 statute acres. This total includes

Division of Land. 120,329 acres under water, but excludes close on half a million acres (481,293) under the

large rivers, lakes, and tideways.

It will be seen from the following table that the area under corn and green crops, flax and fruit, amounted in 1916 to 2,400,328 acres or 11·8 per cent. of the total area, the area under hay to 2,406,247 acres, or 11·8 per cent. of the total area, and the area under rotation and permanent pasture to 9,907,702 acres, or 48·6 per cent. of the total. If to the pasture is added the grazed mountain land the total grazed area amounted to 12,436,705 acres or 61·1 per cent. of the total area of Ireland. Woods and plantations amounted to 293,585 acres, or 1·4 per cent. of the total area, while the remaining area, 2,834,260 acres, or 13·9 per cent. of the total area, consisted of bog, marsh, barren mountain, water, roads, building land, waste, &c. In connection with this latter figure it will be seen by reference to Table I., pp. 20-1, that the area of barren or ungrazed mountain was returned in 1916 as 540,451 acres, the area of turf bog as 834,850 acres, the area of marsh as 363,017 acres, and the area of water, roads, building land—including the area of towns and villages—waste, &c., as 1,095,942 acres.

A summary table showing the changes in the acreage of the several crops will be found on page 5 of the present report, and particulars of the acreage of crops in each county and Poor Law Union in 1916 will be found on pp. 32 *et seq.*

The main changes which have taken place between the years 1851 and 1916, are seen in the following table, which shows the areas respectively under corn crops, green crops and flax, and hay, in each of those years.

The shrinkage in the area of crops during the past sixty-five years has been very marked in all four provinces, and it is of interest to compare the changes in the crop acreage by provinces between the years 1851 and 1916 :—

The changes which have taken place in the areas under the various corn crops are shown in the following table for the years 1851 and 1916:—

YEAR.	CORN CROPS.

Wheat.—The great decline in the wheat area, 84.8 per cent., has chiefly affected the provinces of Leinster and Munster.

Oats.—The decline in oats, 51.1 per cent. in the total of Ireland, has been very marked in all four provinces, but chiefly affected Leinster and Ulster.

Barley and Bere.—The total area under barley and bere has declined, but the decrease in Leinster has been small in comparison with the great decrease in each of the other provinces.

Rye.—In the case of rye the decline in the acreage has taken place chiefly in Ulster and Leinster.

Changes in the area of Green Crops and Flax between 1851 and 1916. With regard to the changes in the areas under the various green crops and under flax, the following table presents the figures for the years 1851 and 1916:—

YEAR.	GREEN CROPS.											FLAX.

Potatoes.—The decline in the area of potatoes has taken place in all four provinces, but proportionately to the total area of potatoes the decrease has been greatest in Munster and least in Ulster.

Turnips and Mangels.—The shrinkage in the area under turnips and mangels, has been much less marked than in the case of potatoes. While the area under turnips has decreased, that under mangels has increased. The area of mangels in Ulster is small. In Connacht the area under turnips has always been very limited, but notwithstanding this, the decline, proportionately to the area, has been more marked than in any other province.

Cabbage.—An increase in the area of cabbage in the period 1851-1916 has taken place in each of the provinces except Ulster, but especially in Munster.

Flax.—In the case of flax, of the total area in 1851 of 140,536 acres, there were in Ulster 125,407 acres, in Leinster 4,889 acres, in Munster 5,991 acres, and in Connacht 4,249 acres. The great decline in the area has taken place since 1881, when the area returned for Ulster was 143,873 acres, and for the whole of Ireland 147,145 acres. The area in 1916 was in Ulster 89,306 acres, in Leinster 293 acres, in Munster 773 acres, and in Connacht 1,082 acres.

Hay.—While the area of corn and green crops has been shrinking the area of hay has been extending. The following table shows the total area under hay in each Census year from 1851 and in the year 1916 :—

Total Area under Hay, 1851-1916.					
					ACRES.
1851	..	..	..	..	1,246,408
1861	..	..	..	..	1,546,206
1871	..	..	..	..	1,829,044
1881	..	..	..	..	2,001,029
1891	..	..	..	..	2,059,529
1901	..	..	..	..	2,178,592
1911	..	..	..	..	2,512,403
1916	..	..	..	..	2,406,247

Thus it appears that from 1851 to 1911 there was in each decade a marked increase in the area of hay, with the exception of the ten years from 1881 to 1891, when the increase was comparatively small.

It will be seen from the summary table on page iv, that in 1916 the area under first year's hay amounted to 496,186 acres, the area under second and third years' hay to 374,080 acres, and the area of hay on permanent meadow to 1,535,981 acres. The area of rotation hay is largest in Ulster and in Leinster. The largest area of hay on permanent meadow is in Munster. In Connacht the area under permanent meadow is very large in proportion to the extent of rotation hay.

Pasture.—The total area under corn crops, green crops, flax and hay, amounted in 1851 to 5,858,951 acres, and in 1916 to 4,791,008 acres—a decrease of 1,067,943 acres. This figure represents approximately the increase in the area of pasture in the period 1851 to 1916. There have also been changes from

year to year in the grazed area of moor, marsh, and mountain land, but this marginal grazing land is always difficult to classify and to compare, and its value is relatively small.

Fruit.—Owing to the increasing importance of the fruit crop in Ireland returns have been obtained in each year since 1906 differentiating as far as possible the areas under the chief separate classes of fruit. As will be readily understood, however, there is considerable difficulty in making a return of the areas respectively of the several fruit crops owing to the large extent to which these are grown mixed in the same area. As far as possible the extents of the several crops have been returned separately, though, as will be seen from table 13, p. 74, the area returned as under mixed fruit represents a very considerable proportion of the total area of fruit.

Varieties of Potatoes.—The acreage under potatoes in Ireland in 1916 was 586,308, as compared with 594,467 acres in the year 1915, showing a decrease of 8,159 acres.

The acreage under each of the principal varieties of potatoes planted in 1916, with the percentage of the total, was as follows :—

Varieties of Potatoes.	Acres.	Per Cent.	Varieties of Potatoes.	Acres.	Per Cent.
Champions, ..	276,993	47·2	Windsor Castles ..	5,086	} 5·0
Up-to-Date, ..	107,095	18·3	Dalhousies, ..	2,510	
Irish Queens, ..	51,388	8·8	Shamrocks, ..	2,329	
British Queens, ..	48,781	8·3	Flounders, ..	1,980	
Black Skerries, ..	25,777	4·4	Eclipse, ..	1,231	
Beauty of Bute, ..	18,956	3·2	Epicures, ..	1,114	
Sutton's, ..	14,223	2·4	Gawkies, ..	1,091	
Irish Whites, ..	13,896	2·4	All Others, ..	13,858	

The main feature of this statement is that 47·2 per cent. of the acreage under the potato crop in Ireland consisted of Champions, leaving only 52·8 per cent. for all other varieties—the percentage of some of these being so small as to be barely appreciable when put into figures.

Since 1891 the area under Champions has greatly decreased in extent and also in proportion to the total area under potatoes.

The decline in the area under corn crops, green crops and flax is a feature which stands out in the history of agriculture not only in Ireland, but also in England and Wales, and to a less degree in Scotland. The following tables present summarily the changes in the areas under corn crops, green crops and flax since 1867, the earliest year from which comparative information is available:—

(a) Not distinguished in Returns for 1867.

Summary tables showing the total produce of the several crops, and the average yield per statute acre, **Produce of Crops.** in the years 1914, 1915, and 1916, and the average yield for the ten yearly period 1906-15 will be found on pp. 6-7 of this report. The Returns were prepared from estimates supplied by farmers to the Police Enumerators and from similar figures furnished by crop correspondents in each county, as well as by the County Agricultural Instructors, who checked their estimates by actual weighings. The following summary states briefly the position as regards the several crops.

Grain Crops.—With the exception of barley the yield of grain was less than in 1915. The decrease was greatest in the case of oats, which are the most largely grown of the cereals. The average rates of yield per statute acre of the grain crops in 1916 as compared with 1915, and the average for the ten years 1906-15, were as follows :—

Year.			Wheat.	Oats.	Barley	Rye.
			cwts.	cwts.	cwts.	cwts.
1915	..	..	20.0	18.0	17.8	14.6
1916	..	..	19.8	16.6	18.7	14.5
Average for 1906-1915 }		..	19.8	17.4	19.0	14.6

The estimated yield of *wheat* in 1916 was 1,514,482 cwts. which, while less than the production in 1915, showed an increase of 609,953 cwts., or 67.4 cent., as compared with the average for the 10 years 1906-1915, the area—76,438 acres—at the same time being 30,708 acres, or 67.2 per cent., above the average for the same period. Owing to the low average rate of produce of *oats* in 1916 the total production—17,815,348 cwts.—fell short of the average for the 10 years 1906-1915 by 596,296 cwts., although the area showed an increase of 14,208 acres on the average. The area under oats in 1916 was only 17,071 acres less than in 1915, but 1,785,769 cwts. less were produced. The total yield of *barley* in 1916 was estimated at 2,801,711 cwts., which, though greater than the produce in 1915, was 320,720 cwts. less than the average for the 10 years 1906-1915; the area showed a decrease of 14,242 acres as compared with the average. The total production of *rye* in 1916—96,032 cwts.—was not much less than the yield in 1915, but was 23,743 cwts. below the average for the 10 years 1906-1915, while the area was 1,579 acres less. The yield of *beans* in 1916 was estimated at 24,634 cwts., and of *peas* at 2,403 cwts.; the total area under these two crops in 1916 was only 1,146 acres.

Green Crops.—The average rates of yield per statute acre of the principal green crops in 1916 as compared with 1915, and the average for the ten years 1906-1915 were as follows:—

Year.			Potatoes.	Turnips.	Mangels.	Cabbage.
			Tons.	Tons.	Tons.	Tons.
1915	...	...	6.2	19.2	21.8	12.8
1916	...	...	4.2	16.9	20.2	12.6
Average, 1906-1915		...	5.3	17.4	19.9	11.6

The total area under *potatoes* in 1916 was 586,308 acres, being a decrease of 8,159 acres as compared with 1915, and a decrease of 5,024 acres as compared with the average for the 10 years 1906-1915. The estimated average yield per statute acre in 1916—4.2 tons—and the estimated total production—2,433,346 tons—were the lowest recorded since 1907, the total production being 1,276,717 tons or 34.4 per cent. less than in

1915, and 698,368 tons or 22·3 per cent. less than the average for the preceding 10 years. The total production in Ulster was 29·4 per cent. less than the average, and in Leinster 24·6 per cent., whereas the shortage in Munster was only 12·5 per cent., and in Connacht only 12·3 per cent. As regards the different counties, the percentage shortage was greatest in Down, amounting to 38·5 per cent.; the next worst county was Armagh with 34·8 per cent. short, Cavan with 33·9 per cent., and Wicklow with 33·6 per cent. Clare suffered least, the production being only 2·7 per cent. below the average for the preceding 10 years. In 1916 the total produce of the potato crop in the United Kingdom was abnormally low, being on the whole 19 per cent. below the average. The produce in England was only 6·8 per cent. short and in Wales 6·4 per cent., but in Scotland it was 43·2 per cent. below the average for the 10 years 1906–1915, and in Ireland, as already mentioned, 22·3 per cent.

As compared with the average for the 10 years 1906–1915, the total production of *turnips* in Ireland in 1916—4,435,911 tons—showed a decrease of 347,375 tons, but it was 655,123 tons less than the yield in 1915; the area in 1916 was 11,777 acres below the average. The produce of *mangels* in 1916 amounted to 1,627,834 tons, which, though 179,015 tons less than the yield in 1915, was 123,077 tons more than the average for the preceding 10 years, while the area was 4,628 acres more than the average. *Cabbage* with a total yield in 1916 of 431,878 tons, showed a decline of 28,901 tons as compared with 1915 but a slight increase on the average for the 10 years 1906–1915, although the area was 2,740 acres less. As regards the smaller crops, the yield of *carrots* in 1916 was estimated at 11,001 tons, of *parsnips* at 5,671 tons, of *vetches* at 26,847 tons, and of *rape* at 34,505 tons. The total extent under these four crops in 1916 was only 6,680 acres.

Flax.—The yield per acre of the flax crop in 1916 fell short of the yield obtained in 1915. The average production of fibre worked out at 25·4 stones per statute acre as compared with 29·1 stones in 1915, and was 5·5 stones below the average of 30·9 stones for the 10 years 1906–15. The total produce of the flax crop in 1916 was estimated at 2,318,652 stones, an increase of 772,385 stones or 50 per cent. as compared with 1915 and of 682,083 stones or 41·7 per cent. as compared with the average for the 10 years 1906–1915. The area under flax in 1916—91,454 acres—was 38,311 acres or 72·1 per cent. more than in 1915, and 38,531 acres or 72·8 per cent. more than the average for the 10 years 1906–1915.

Hay.—The estimated average rates of yield per statute acre of the three classifications of hay and of all hay in 1916, as compared with 1915 and the 10 years 1906–1915, were as follows:—

Year.			1ST YEAR'S HAY.	2ND AND 3RD YEARS' HAY.	PERMANENT MEADOW.	ALL HAY.
			Tons.	Tons.	Tons.	Tons.
1915	...	...	1.9	1.8	2.1	2.0
1916	...	...	2.2	2.0	2.3	2.2
Average, 1906-1915 ...			2.0	1.8	2.2	2.1

The yield of first year's hay in 1916 was estimated at 1,077,580 tons, of second and third years' hay at 751,075 tons, and of hay from permanent meadow at 3,496,777 tons, the total production of the hay crop thus amounting to 5,325,432 tons. This shows an increase of 228,660 tons as compared with 1915, and of 364,009 tons when compared with the average of the 10 years 1906-1915. The total area under hay in 1916 was 2,406,247 acres, which, though 89,682 acres less than in 1915, was only 1,280 acres less than the average for the 10 years 1906-1915.

LIVE STOCK.

The numbers of the various classes of live stock on 1st June, 1916, the changes as compared with 1915, **Changes in the Numbers of Live Stock.** and the particulars of the numbers of stock in each County and Poor Law Union in 1916 are shown on pp. 76 *et seq.* of the present report.

The following table shows the changes in the total numbers of live stock which have taken place in the period between 1851 and 1916 :—

*The large increase in Goats in 1916 is attributable to a detailed classification having been introduced in that year, resulting in a more complete enumeration of kids.

In regard to live stock, as compared with England, Scotland, and Wales, the outstanding features in Ireland are the relatively large number of cattle and the very small number of sheep. The following table shows the number of live stock in Ireland, England,

Wales, and Scotland, in the year 1867 (the earliest date from which comparative statistics are available), in the Census years from 1871 and in the year 1916 :—

* Statistics not collected until 1869.

† Owing to the inclusion of a new class of horses, " Other horses on agricultural holdings " in the Returns for 1911 and succeeding years, the figures given in this table for the years 1911 and 1916 are not comparable with those given for the previous years.

In connection with the statistics of live stock, it is of interest to see the changes in the numbers exported from Ireland to Great Britain and the Isle of Man. Considerable fluctuations occur from year to year, and the exports are shown in the following table for a period of ten years. The years taken are the periods of twelve months ended 31st May as the figures will thus best indicate one of the causes of increase or decrease in the numbers of live stock enumerated in Ireland on the 1st June.

The following table shows the proportion of the number of horses, cattle, sheep, and pigs exported to their total number in Ireland for each of the years 1907-1916 :—

YEAR (ENDED 31ST MAY).	Percentage of Horses, Cattle, Sheep, and Pigs Exported, to Total Horses, Cattle, Sheep, and Pigs in Ireland.

1916	1.4	16.3	13.4	15.3

* Horses exported for military purposes are not included in these figures. The apparent decline in the total numbers of horses exported in 1915 and 1916 is due to an increased export of such horses. It is believed that in reality there was no appreciable change in the total number of horses (military and other) exported.

BEE-KEEPING.

According to the returns received there would appear to have been a decrease of 21·7 per cent. in the quantity of honey produced in 1915 as compared with the preceding year, the returns for which showed an increase of 27·2 per cent. as compared with the quantity in 1913. The quantity of honey produced, according to the returns, was 615,385 lbs.; of this 174,032 lbs. were produced in the Province of Leinster, 122,603 lbs. in Munster, 227,544 lbs. in Ulster, and 91,206 lbs. in Connacht. Of the 615,385 lbs., 543,493 lbs. were produced in hives having movable combs, and 71,892 in other hives. It was stated that 132,404 lbs. were run honey, and 482,981 lbs. section honey. The number of stocks on 1st April, 1915, amounted to 32,601, of which 23,741 were in hives having movable combs, and 8,860 in other hives; there were 2,628 lbs. of wax manufactured in 1915, of which 2,144 lbs. were from hives having movable combs and 484 lbs. from other hives.

In connection with the statistics of bee-keeping, it should be stated that from the nature of the case there is great difficulty in obtaining returns which approach completeness. The collection, therefore, of information by local societies of bee-keepers and their co-operation with the Department in making the returns as complete as possible is of great importance. Few countries have any satisfactory record of their production of honey, but with co-operation and organisation among bee-keepers the difficulty can be largely overcome.

FORESTRY.

Of the total area of Ireland, about 1·4 per cent. is under woods. The woods in England are 5·2 per cent., in Scotland 4·5, and in Wales, 3·9 per cent. of the total area.

Since 1851 (with the exception of the year 1852) the acreage under woods and plantations has been ascertained annually in connection with the Agricultural Statistics. In 1907 certain changes were introduced into the inquiries made with a view to ascertaining the area respectively under conifers and under broad-leaved trees, and likewise the area of mixed conifers and broad-leaved. The ages also of the plantations were ascertained as far as possible. A statistical summary of similar information obtained for 1916 is shown by counties, provinces, and for all Ireland on pp. 104 *et seq.* of this Report.

The acreage returned as under woods and plantations in each year from 1912 to 1916 was as follows:—

Year.				Woods and Plantations. Acres.
1912	...	...	...	298,735
1913	...	...	...	297,809
1914	...	...	...	296,493
1915	...	...	...	295,325
1916	...	...	...	293,585

The inquiries relating to planting and felling operations instituted in 1891, and continued in the **Planting and Felling.** twenty-four following years were repeated in 1916. According to the returns during the year ended 31st May, 1916, 686 acres were planted with trees, 73 acres more than the extent planted in the preceding year, while 1,860 acres were cleared, an increase of 246 acres.

During the 5 years ended 31st May, 1916, 8,458 acres were returned as having been cleared of trees and only 4,248 acres as planted.

HOLDINGS AND OCCUPIERS.

The figures now published showing the number of holdings and occupiers in Ireland, are not directly comparable with those previously published for the years up to and including 1909. A detailed explanation, together with a method to be employed for instituting an indirect comparison, was published on pp. xvii, *et seq.* of this Report for the year 1914.

Bearing in mind the disparity between the figures published for the years up to 1909 inclusive, and for the following years it is desired to emphasise the fact that the figures for holdings and occupiers which appear in the following tables are the closest approximations that can be made to the total number of holdings and occupiers,

The following table shows the number and the sizes of holdings in the year 1916 :—

Size of Holdings.	Leinster	Munster	Ulster.	Con-nacht.	Ireland.
Not exceeding 1 acre	36,887	32,550	29,778	8,592	107,807

" 15 " " 30 "	18,222	20,405	49,080	36,390	124,097
" 30 " " 50 "	13,421	20,504	24,609	13,770	72,304
" 50 " " 100 "	13,072	22,432	15,449	6,557	57,510
" 100 " " 200 "	6,836	9,818	4,102	2,436	23,192
" 200 " " 500 "	3,039	2,937	1,167	1,292	8,435
Above 500 acres	665	498	323	539	2,025
Total No. of Holdings ..	124,866	134,237	195,285	117,657	572,045

The holdings under 1 acre do not contribute appreciably to the agricultural output of the country, and it is particularly difficult to determine the actual number of these holdings as it is merely a matter of opinion where the line dividing the small town garden from the agricultural plot proper should be drawn. Still, as the figures are of interest from the social and economic point of view, the numbers of these holdings as enumerated by the police are included in these reports. However, in dealing with any problem involving the number of holdings in Ireland, it should be taken into consideration that the number of holdings not exceeding one acre is considerable, and for some purposes it will be found best to exclude the number of these holdings as they add but little to the agricultural output.

The following table shows the number of holdings exceeding one acre in each Province and in Ireland in each of the five years 1912 to 1916 :—

—	Leinster.	Munster.	Ulster.	Con-nacht.	Ireland.
1912	89,122	101,418	166,107	108,819	465,466

NOTE.—On comparing the above table with tables L and M it will be observed that the number of "occupiers" of 200 acres and upwards is greater than the number of "holdings" of 200 acres and upwards. The reason for this difference is that where two or more separate holdings are in the hands of one occupier, the holdings are included separately in their respective classes according to size while the occupier appears in the class indicated by the total amount of land in his occupation. For example if one person is the occupier of two separate holdings of 90 and 150 acres, these holdings will appear in the table of holdings under the 50 to 100 acre class and the 100 to 200 acre class respectively; whereas the occupier will be included in the 200 to 500 acre class as being in occupation of 90 + 150 or 240 acres.
